Alphabetical List of Collaborators		189

All the themes in the Plan are listed by fields of research. Each theme is coded according to the JINR system of classification and contains the following information:

- | | | |
|-------------------------------------|---|--|
| the first number* | - | the field of research |
| the second number** | - | the conventional number
of Laboratory or other Division of JINR |
| the third number | - | the theme's ordinal number |
| the fourth and
the fifth numbers | - | the years of the activity's beginning
and completion |

-
- * 01 – Theoretical Physics

Fundamental Interactions of Fields and Particles

Theme leaders:

D.I. Kazakov
O.V. Teryaev

Participating Countries and International organizations:

Argentina, Armenia, Azerbaijan, Belarus, Bulgaria, Canada, CERN, Chile, China, Croatia, Czech Republic, Finland, France, Georgia, Germany, Greece, Hungary, ICTP, India, Italy, Japan, Kazakhstan, Mexico, Mongolia, New Zealand, Norway, Portugal, Poland, Republic of Korea, Russia, Serbia, Slovakia, Spain, Sweden, Switzerland, Ukraine, United Kingdom, USA, Uzbekistan, Vietnam.

Issues addressed and main goals of research:

The main aim of the research within the theme is the construction of theoretical models and their application to the description of properties of elementary particles and their interactions. This research includes the following directions of activity. The development of quantum field theory formalism in gauge and supersymmetric theories. Construction and investigation of the models of particle physics beyond the Standard Model.

Theoretical support of experiments at the Large Hadron Collider on the search of new physics and the study of the properties of the Higgs boson.

Calculation of radiative corrections to the processes of particle creation within the Standard Model and its extensions. Investigation of neutrino properties and neutrino oscillations. Investigation of the hadron properties within quantum chromodynamics and phenomenological quark models. Study of the hadron spin structure with the help of generalized and transverse momentum dependent parton distributions and theoretical support of NICA/SPD program.

Study of heavy quark properties and exotic hadrons. Lattice simulations for obtaining nonperturbative results in gauge theories. Investigation of dense hadronic matter and theoretical support of the MPD/NICA program.

Theoretical support of a wide range of current and future experiments at JINR, IHEP, CERN, GSI, JLab and other physics centers.

Expected results in the current year:

1. Verification of the completeness of basis functions for elliptic polylogarithms by explicit calculations of the two-loop Feynman diagrams in the nonrelativistic QCD.

Development of algorithm for the epsilon expansion of generalized hypergeometric functions at integer and half-integer index values via reduction of the corresponding differential system to the epsilon form.

Derivation of systematic solution of quantum spectral curve equations for the case of maximally supersymmetric Yang-Mills theory in 4 dimensions by expansion in the double limit of weak coupling and large spins of $sl(2)$ operators.

Perturbative calculation of anomalous dimensions of large-charge operators in different QFT models and comparison of results with predictions obtained via semi-classical methods.

Comprehensive analysis of the prospects for experimental discovery of different signatures in a number of Standard Model extensions with additional abelian gauge symmetries. Investigation of the possibility of resonant leptogenesis in the so-called superweak extensions of the SM.

Calculation of effective potentials in modified gravity models taking into account quantum effects. Determination of the range of parameters of these models allowing realistic solutions for the inflationary epoch of the early universe.

Detailed cosmological and astrophysical analysis of the properties of Primordial Black Holes as candidates for Dark Matter and connections with the current Supermassive Black Holes.

Analytical evaluation of 2-loop radiative corrections to the parapositronium lifetime.

Investigations of the multiplicities of quark and gluon jets with the account of resummation of large logarithms arising in the high-energy limit.

Derivation of convenient parameterization for the transverse-momentum-dependent parton densities in nucleons and nuclei in the first two orders of perturbation theory.

Fit of the strong coupling constant from the deep inelastic scattering data in the first four orders of perturbation theory taking into account the resummation of large threshold logarithms

Study of the relations for the spacelike and timelike kernel functions for the hadronic contribution to the muon anomalous magnetic moment.

2. Analytic evaluation of 3-loop 2-point Feynman master-integrals with composite external vertices for arbitrary indices of propagators as a hypergeometric series.

Derivation and analysis of a full differential equation system for Feynman integral with maximal powers of masses and momenta using the Mellin-Barnes integral representation.

Calculation of the $a_s^2(a_s\beta_0)^{n-1}$ and $a_s^3\beta_1(a_s\beta_0)^{n-2}$ contributions to the nonsinglet Efremov-Radyushkin-Brodsky-Lepage evolution kernel and the correlator of two vector composite quark currents in QCD that will allow to clarify numeric hierarchy among different parts of the beta-expansion for the correlator and kernel in the orders a_s^2 and a_s^3 (a_s and β_n are the strong coupling and (n+1)-loop coefficient of the beta-function expansion in QCD, respectively).

Calculation of pion electromagnetic form factors in framework of the light-cone sum rules in the low and (or) moderate energy regime. The domain of the framework applicability will be expanded by using analytic perturbation theory in order $O(\alpha_s)$ and compared with high precision Jlab experimental data.

Revision of the distribution amplitudes (leading twist) of (pseudo)scalar and (longitudinal and transverse) vector mesons within the QCD SRs taking into account new QCD corrections $O(\alpha_s^2)$ obtained for all of their components.

Analytical and numerical optimization of perturbation series for observables using beta-expansion and renormalization group in QCD for improvement of estimates of: $R[e^-e^+\rightarrow\text{hadrons}]$, width of tau-decay, Bjorken polarized SR that are known in multiloop calculation and comparison of our results with experimental data.

Evaluation of the QCD analytic coupling constant in high orders of perturbation theory and its use for studying processes at small values of the square of the momentum transfer.

Study of the sum rules for hadron fragmentation functions in QCD making use of the generalized truncated Mellin moments approach.

Study of the new-found types of transverse momentum dependent parton distributions within the original framework. The new approach involves the new-found additional contribution in the inverse Radon transforms.

Extraction of transverse generalized parton distributions from pseudoscalar meson leptonproduction at electron-ion colliders.

Study of the hadronic structure function of the Drell-Yan processes in the framework of perturbative QCD in α_s^2 order in the coupling constant. Check of the Lam-Tung relation in α_s^2 order in the strong coupling constant.

Establishing of a computational framework to analyze CMS Open Data.

Examination of the methods of extraction of the total cross sections to understand a tension between the data obtained by different collaborations based on the analysis of experimental data on the elastic differential cross sections in the energy range 7-13 TeV. Determination of the structure of the elastic scattering amplitude in the framework of the High Energy Generalized Structure model taking into account the hadron structure at NICA energies.

Study of the dark axion portal and implementation to fixed target experiments to obtain bounds for a model. Bounds are needed for analysis of New physics and NA64 experiment, in particular. The visible mode of the axion and dark photon will be studied.

Study the phase diagram of SU(2)-Higgs electroweak theory. Study of Z(N) symmetry and thermodynamic properties of meta-stable states at very high temperature in the context of QCD and electroweak theory.

3. Calculation of the branchings of both leading electromagnetic decays and suppressed weak nonleptonic two-particle decays of vector B-mesons.

Search for possible theoretical explanation of the observed anomalies in B-physics.

Contribution to the research program for future electron-positron colliders. High-precision theoretical predictions for the processes of particle interaction at these colliders and the effects associated with the polarization of the initial beams and produced tau leptons.

Investigation of the spectral structure of the pionic/kaonic helium using the NRQED formalism with account of $m\alpha^6$ and partially $m\alpha^7$ order corrections. Calculation of the dependence of the spectral lines on the masses of pions (kaons).

Derivation and calculation of the relativistic and radiative corrections for the forbidden dipole (E1) transitions in the H_2^+ hydrogen molecular ion. It is expected that precision spectroscopy of H_2^+ ions will provide the most accurate data for the proton-to-electron mass ratio with the relative precision better than 10^{-12} .

4. Study of propagation of nonlinear waves inside the nonextensive quark-gluon plasma medium under the influence of a magnetic field.

Study of the thermodynamics of the quark-gluon and the hadronic medium using anisotropic quasi-power-law distributions.

Study of the violations of the Okubo-Zweig-Iizuka rule in the lattice gauge theory for the scalar, pseudoscalar, vector, and axial vector channels and estimation of the effects of monopoles, instantons, and strong magnetic fields.

Analysis and interpretation of the data from the Large Hadron Collider on the charge balance function from Pb+Pb collisions at the center-of-mass energy 2.76 TeV per nucleon pair in the framework of the HYDJET++ model.

Analysis of velocity, vorticity, and helicity and estimation of global polarization of hyperons in heavy-ion collisions at NICA energies using the Parton-Hadron-String Dynamics model.

Study of recently predicted thermal-shear and spin-Hall contributions to the particle polarization in heavy-ion collisions and their impact on the Λ polarization in the NICA-FAIR-HADES energy range.

Study of a collective flow of light nuclei produced in heavy-ion collisions in the SPS-RHIC energy range within the thermodynamic approach based on the three-fluid dynamics.

Description of the Delta resonance–nucleon system at finite temperature and a small baryon chemical potential.

Description of the formation of the quasi-periodic and periodic structures at phase transitions in nuclear matter.

Investigation of the properties of phase transitions and anisotropy of interquark interaction in a fast rotating (quark-)gluon plasma in lattice QCD. Study of the possibility for the existence of inhomogeneous phases in rotating QCD.

Calculation of nonlocal observables for a strongly coupled plasma within the holographic approach. Phase transition analysis and investigation of rotation effects.

Study of the Equation of State of QCD at nonzero baryon density in the external magnetic field using lattice simulation with physical quark masses.

Calculation of the thermodynamic potential in the 3-flavour chiral quark models with the inclusion of the full momentum dependence of the in-medium meson polarization loops and the corresponding meson Landau damping in the quark medium for the zero and finite baryon chemical potential.

Study of the equation of state of the cold quark matter using a new chiral density functional including diquark degrees of freedom and its effect on the neutron star structure.

Investigation of an algorithm for solving the Israel-Stewart hydrodynamic equations using an implicit method for numerical solving the relaxation equations.

Investigation of hadronic vacuum polarization contributions to the anomalous magnetic moment of muon in the framework of the Domain Model of QCD vacuum taking into account radially excited mesons.

Study of critical phenomena in hadronic matter due to the condensation of gluon tachyonic modes in chromomagnetic fields in the deconfined phase.

Study of the photon production in heavy ion collisions via the conversion of gluons to photon in the presence of the background gauge fields taking into account the contribution of all Landau levels in the quark propagator, including the contribution of quarks with mass squared of the order of the strength of the background field.

Study of anomalous transport phenomena in a relativistic quantum medium related to its stability with respect to the space-time curvature effects related to the fundamental question of the relationship between gravity, quantum physics and thermodynamics.

5. Investigation of tau lepton decays and processes of electron-positron annihilation into mesons including processes with three pseudoscalar mesons in the final state.

Calculation of the contributions of the leading and following the leading logarithmic corrections to the processes of electron-positron annihilation, Bhabha scattering and muon-electron scattering studied in experiments at modern and future colliders, including the Super Charm-Tau Factory, FCC-ee, CEPC, etc.

Obtaining an effective action of QCD at low energies, the constants of which are expressed in terms of parameters characterizing the explicit and spontaneous breaking of chiral symmetry.

Calculation of masses, electromagnetic form factors, decay widths and other experimentally observed characteristics of mesons based on the new effective action of QCD at low energies. Finding the contributions describing the effects of a clear violation of aromatic symmetry which are not taken into account by the standard Nambu-Jona-Lasinio model.

Calculation of the cross sections for the electron-positron annihilation into a proton-antiproton pair for a number of charmoniums (J/Ψ , $\Psi(2S)$, $\chi_c(3556)$) in the intermediate state for the conditions of the BES-III and PANDA experiments. Determination of the relative phases between the individual contributions of intermediate vector mesons and the electrodynamic channel.

Determination of the contributions of the channels with charmoniums in the intermediate state to Drell-Yan-like processes with protons and nuclei in the initial state in the context of their study at the NICA collider.

Study of neutrino-nucleus interactions within the models with running axial nucleon mass, superscaling and light meson production; application of the results to event simulation in the current neutrino experiments (NOvA, DUNE, and others).

Global statistical analysis of electron scattering data on hydrogen and deuterium in order to refine the parameterizations of the electromagnetic form factors of the nucleon. Application of the results to neutrino oscillation experiments.

Development of a model that implements the idea of loop generation of the hierarchical fermion spectrum of the Standard Model based on the corresponding flavor symmetry.

Study of the behavior of the dressed neutrino propagator at short macroscopic baselines within the covariant quantum-field formalism with wave packets.

Investigations of gravitational lensing and shadow formation for the Ruffini–Arguelles–Rueda model of dark matter.

Finding constraints on the models of the Galactic Center and the center of the galaxy M87 from observations of their shadows and trajectories of bright stars.

Development of a software package for selecting data from the TAIGA experiment to search for events co-located with ultra-high energy neutrinos registered by the IceCube and Baikal-GVD facilities and with gravitational-wave events registered by the LIGO and Virgo detectors.

List of Activities

Theory of Nuclear Systems

Theme leaders:

N.V. Antonenko
S.N. Ershov
A.A. Dzhioev

Participating Countries and International organizations:

Armenia, Belarus, Belgium, Brazil, Bulgaria, China, Czech Republic, Egypt, France, Germany, Greece, Hungary, India, Iran, Italy, Japan, Kazakhstan, Lithuania, Mexico, Moldova, Norway, Poland, Republic of Korea, Romania, Russia, Serbia, Slovakia, South Africa, Spain, Sweden, Ukraine, United Kingdom, USA, Uzbekistan.

Issues addressed and main goals of research:

Suggestion of new theoretical approaches for description and prediction of properties of superheavy, unstable nuclei and exotic nuclear systems, calculation of their characteristics; improvement of models for explanation of mechanisms of reactions of nuclei with particles and nuclei at low and intermediate energies; establishment of universal laws in low-dimensional small-particle systems and small-particle systems at ultra-low energies; development of the two-stage hybrid model of nuclear collisions at relativistic energies; study of nonlinear quantum processes in the interaction of photons with ultrashort high-frequency laser pulses.

Expected results in the current year:

1. Microscopic calculations of EC/ β^+ -decay half-lives for nuclei along the α -decay chain of ^{288}Mc .

Investigation of the anomalous behavior of the moment of inertia in well deformed light nuclei.

Calculation and analysis of the double-gamma decay widths of quadrupole states of medium-heavy and heavy nuclei.

Study of relativistic corrections to the symmetric nuclear matter and pure neutron matter equations of state based on the modified Fayans functional.

Study of the nature of low-lying 2^+ , 1^+ and 0^+ states in axially symmetric nuclei by the Wigner function moments method. Calculation of energies, excitation probabilities and the corresponding currents.

Analysis of the contribution of 3 particle – 3 hole configurations in the formation of isoscalar giant monopole resonance of ^{48}Ca .

Study of the collective dynamics in nuclei from different mass regions within the framework of the proton-neutron symplectic model.

Study of non-adiabatic effects in the properties of the negative parity bands of the ^{238}U nucleus.

Study of the possibility of constructing an energy density functional that allows describing the nucleus-nucleus potential.

2. Prediction of the energies of 2^+_{11} states in superheavy nuclei.

Study of the structure of low-lying states and electromagnetic transitions in odd-proton nuclei in alpha-decay chains of superheavy nuclei.

Formulation of the collective model with pairing and alpha-particle type correlations. Description of the lowest states of transient nuclei.

Suggestion of the method for calculating the pre-equilibrium emission of clusters in the collision of heavy ions to analyze the mechanism of incomplete fusion of nuclei. Calculation of the angular and energy distributions of these clusters.

Investigation of reactions for obtaining superheavy elements 119 and 120. Study of the isotopic dependence of the complete fusion cross section.

Prediction of the fission properties of superheavy nuclei. Consideration of fission from isomeric states. Study of the influence of the shape of the scission configuration of a fissioning nucleus on the dynamics of fragments.

- Investigation of the possibility of obtaining exotic nuclei in cluster transfer reactions.
- Application of the quantum-diffusion approach to the description of astrophysical fusion reactions.
- Description of one-nucleon transfer reactions in ${}^9\text{Be} + {}^3\text{He}$ collisions.
- Description of the ${}^8\text{He}$ structure within the five-body approach.
- Study of the effects of spin-orbit interaction on the transport properties of nanosystems (graphene, quantum dots, wires).
Features of the qubit embedded in the thermostat.
3. Investigation of the structural features of light weakly bound nuclei. Time-dependent numerical analysis of breakup reaction of halo nuclei within the quantum-quasiclassical approach.
- Effect of the supernova explosion mechanism in neutrino spectra and prospects for observations by large-volume telescopes.
- Regularization of the three-body problem with contact and singular interactions at the triple collision point.
- Investigation of diatomic molecule alignment in two-color laser fields.
- Determination of the limit of probabilities of ionization and excitation of atoms by the laser field at a carrier frequency tending to zero.
- Establishment of quantum speed limits for the subspace evolution governed by time-dependent Hamiltonians.
- Investigation of low-energy electron-neutron scattering.
- Development of a method for locating extremely narrow resonances and calculating their parameters.
- Analysis of strong-field atomic dynamics within quantum quasi-classical approach including the center of mass motion.
- Study of the problem of “tunneling time” in laser ionization of atoms by the method of Bohmian (quantum) trajectories.
- Development of a method for calculating the parameters of the generalized optical potential model via a scattering matrix of the incoming wave boundary condition model for sub-barrier fusion heavy ion reactions.
4. Analysis of the pi-mesons, proton- and nucleus-nucleus scattering cross-sections in the region of collision energies from 30 MeV to 1 GeV based on the development of appropriate models of microscopic optical potential.
- Analytical calculations of the lepton g-2 anomaly.
- Investigation of the finite-temperature behavior of ghost and gluon propagators within an approach based on the rainbow truncated Dyson-Schwinger equations in the Landau gauge.
- Study of essentially multi-photon quantum processes in interaction of ultra-relativistic electrons with polarized intense laser pulses. Finding of observables that are sensitive to the dynamics of multi-photon processes, for example, differential distributions of Compton photons and electron-positron pairs formed in electron-laser interaction.
- Development of methods of nonextensive statistical mechanics applied to describe the particle production and transverse momentum distributions of hadrons in heavy-ion and proton-proton collisions.
- Construction of a model for describing short-range quasideuteron correlations in nuclei and its application for describing of proton-nucleus reactions at relativistic energies, including knockout of the correlated pn-pair and cumulative production.
- Development of relativistic methods to study the polarized elastic proton-deuteron scattering at high energies.
- Investigation of the cross sections of Y absorption and Y production in BB-collisions in the framework of the covariant quark model with SU(5) Lagrangian including anomalous interactions. Investigation of two-photon decays and Dalitz-decays of light mesons in the framework of the NJL model at finite temperature and baryon density.
- Analysis of the Bethe-Salpeter solutions in coordinate space, establishing some patterns and investigation of abnormal solutions.

Theory of Complex Systems and Advanced Materials

Theme leaders:

V.A. Osipov
A.M. Povolotskii

Participating Countries and International organizations:

Armenia, Australia, Austria, Belarus, Brazil, Bulgaria, Canada, Czech Republic, Denmark, Ecuador, Egypt, Finland, France, Germany, Hungary, India, Iran, Italy, Japan, Mongolia, New Zealand, Poland, Republic of Korea, Romania, Russia, Serbia, Slovakia, Slovenia, South Africa, Spain, Switzerland, Taiwan, Ukraine, United Kingdom, USA, Uzbekistan, Vietnam.

Issues addressed and main goals of research:

Development of analytical and numerical methods for studying complex many-body systems that are of current interest in modern condensed matter physics, the development of mathematical models of these systems and the identification of universal laws on the example of studied models. Analysis of both lattice and field-theory models of equilibrium and non-equilibrium statistical systems and modeling of a wide class of new materials, including nanostructured materials, which are of great practical importance. The concepts of scaling and universality allow one to go beyond the model approach and to apply the results obtained to broad classes of phenomena studied in the physics of condensed matter. Study of a wide range of universal phenomena in complex systems - phase transitions in condensed media and high-energy physics, scaling in (magneto)hydrodynamic turbulence, chemical reactions, percolation, etc. by the methods of quantum field theory including the functional renormalization group. The results obtained will be used in carrying out experimental studies of condensed matter at JINR. It is important to note the markedly growing interdisciplinary nature of research, where condensed matter physics and statistical physics closely intersect with atomic and nuclear physics, particle physics, mathematical physics, astrophysics, and biology.

Expected results in the current year:

- Theoretical and experimental investigations of 3D dense random packing with a power-law size distribution at nano and micro scales.

Simulation of contrast-variation small-angle neutron scattering experiments from biological macromolecules.

Numerical investigation of irradiation resistance of Si-, B- carbides, as well as of $\text{HfC}_{(x)}\text{N}_{(1-x)}$ nonstoichiometric compound.

Ab initio estimation of the exchange parameters of Kitaev materials based on transition and rare-earth metals and calculation of their spin-wave spectrum.

Exploration of Kitaev candidate material RuCl_3 and its minimal model.

Calculation of the magnetic phase diagram in strongly-correlated electronic systems within the t-J model for electron doping. Comparison of the obtained results with experiments in the electron-doped cuprates.

Development of a theory of stability for mixtures of quantum fluids.

Elaboration of a model of solids with superfluid dislocations.

Preparation of a review on the models of mixed matter.

Application and development of quantum algorithms for computational problems in condensed matter physics and quantum chemistry.
- Study of physical phenomena in Josephson nanostructures with ferromagnetic layers.

Development of a model of the Josephson junction coupled to a closed chain of nanomagnets. Study of the possibility of using this junction for determining the state of a chain of nanomagnets.

Investigation of the temperature dependence of the characteristics of various nanostructures such as the band gap, conductivity, and mobility. Application of the frozen phonon method to various modified carbon nanotubes and graphene for determining ways of improvement of their transport characteristics.

Study of the transport properties of quasi-two dimensional polycrystalline Molybdenum disulfide. Investigation of the behavior of electrical resistivity as a function of the transport gap and grain boundary size for different carrier densities.

Study of the topological Hall effect induced by the classical spin background and topological superconductors on the skyrmion lattice using gauge theory.

Investigation of the backscattering of chiral fermions in topological insulators due to rough edges.

3. Description of the characteristics of the dimer models on finite-dimensional lattices with different geometries under different boundary conditions. Detailed investigation of the "entangled states" of a complex quantum system with single-ion anisotropy.

Application of the rotor-router model, known as the Eulerian walk, to studying of the dynamics of double-strand breaks of DNA.

Detailed investigation of multidimensional complex hypergeometric integrals in the Mellin-Barnes representation.

Construction of new exactly computable integrals and symmetry transformations for integrals of higher order that are derived by reduction of known relations for elliptic hypergeometric integrals describing superconformal indices in four-dimensional field theories.

Proof of the Derkachov-Manashov hypotheses for the complex Gustafson integrals in the theory of non-compact spin chains.

Construction of a parafermionic generalization of hypergeometric functions and a detailed investigation of the supersymmetric case related to $6j$ -symbols for supergroups in the Ramond sector as well as in the Neveu-Schwartz sector. Proof of characteristic identities (i.e., of quantum versions of the Cayley-Hamilton theorem) for a family of orthogonal Quantum Matrix algebras.

Investigation of the quasi-oscillator presentation for the linear quantum groups $Uq(\mathfrak{gl}_n)$: construction of finite-dimensional representations and realization of the Hopf structures in terms of the quasi-oscillators.

Construction of nonlocal correlation functions in the branching polymer model near the boundary in the presence of anisotropy.

Classification of Markov dualities in one dimensional integrable stochastic models and two-dimensional lattice models constructed with the use of representations of Hecke algebras of infinite order and their application to solutions of these models.

Evaluation of densities of loops in the $O(1)$ dense loop models and of percolation clusters in critical percolation on the cylindrical lattice of rotated orientation and with an odd circumference.

4. Investigation of BEC-BCS crossover in multi-component ultra-cold fermions within the functional renormalization group approach: elucidation of possible phase diagrams and calculation of the respective transition temperatures. Elaboration of an appropriate computational machinery in view of non-perturbative renormalization group flows.

Development of computational methods for calculating the contributions of multi-loop diagrams to the renormalization group functions of dynamic models. Investigation of the dynamics of the superconducting phase transition in low-temperature superconductors.

Investigation of the effects associated with the violation of mirror symmetry in magneto-hydrodynamic developed turbulence. Calculation of two-loop Feynman diagrams generated by the Lorentz force and two-loop diagrams of the response function, leading to an exponential growth of magnetic field fluctuations in the region of large scales. Study of turbulent dynamo.

Construction of field theory models with some effective actions for investigation of chemical reactions of different kinds of particles occurring in random environments. Study of the infrared scaling behavior of statistical correlations of particle densities by renormalization group methods.

Study of isotropic and directed bond percolation. Calculations of three-loop Feynman diagrams generating ultraviolet divergences. Calculation of fixed points of the renormalization group equation and calculation of critical exponents for physically significant and experimentally observable quantities - response functions, density of active nodes (agents), effective radius and mass of active zones.

Study of the effects of isotropic motion of a medium with various statistical characteristics on the possibility of the Hua-Kardara self-organized criticality model to exhibit anisotropic scaling behavior.

Investigation by means of the functional renormalization group method of possible asymptotic regimes corresponding to non-universal scaling behavior of a surface growing in a random media and described by a model including an infinite number of types of interactions.

Modern Mathematical Physics: Gravity, Supersymmetry and Strings

Theme leaders: A.P. Isaev
S.O. Krivonos
A.S. Sorin

Participating Countries and International organizations:

Armenia, Australia, Brazil, Bulgaria, Canada, CERN, Czech Republic, Estonia, France, Germany, Greece, ICTP, India, Israel, Iran, Ireland, Italy, Japan, Lithuania, Luxembourg, Norway, Poland, Portugal, Republic of Korea, Russia, Spain, Taiwan, Ukraine, United Kingdom, USA.

Issues addressed and main goals of research:

The main purpose of research in modern mathematical physics is the development of mathematical methods for solving the most important problems of modern theoretical physics: clarifying the nature of fundamental interactions and their symmetries, construction and study of effective field models arising in the theory of strings and other extended objects, uncovering of the geometric description of quantum symmetries and their spontaneous breaking in the framework of search for a unified theory of all fundamental interactions, including quantum gravity. Mathematical physics in recent years has been characterized by increasing interest in identifying and effective use of integrability in various areas, and in applying powerful mathematical methods of quantum groups, supersymmetry and non-commutative geometry to quantum theories of fundamental interactions as well as to classical models.

The main goals and tasks of the research within the theme include: development of new mathematical methods for investigation and description of a variety of classical and quantum integrable models and their exact solutions; analysis of a wide range of problems in supersymmetric theories including models of superstrings and superbranes, study of non-perturbative regimes in supersymmetric gauge theories; development of cosmological models of the early Universe, primordial gravitational waves and black holes. The decisive factor in solving the above problems will be the crucial use of the mathematical methods of the theory of integrable systems, quantum groups and noncommutative geometry as well as superspace techniques.

Expected results in the current year:

1. Investigation of holographic renormalization group flows in 3d supergravity at zero and finite temperatures using the theory of dynamical systems. Construction of asymptotic gravity solutions corresponding to holographic RG flows in 3d supergravity. Investigation of fixed-point deformation using the trace of the energy-momentum tensor (TTbar-deformation) in the framework of the holographic approach.

Study of the interior of a black hole using random matrix ensembles holographically dual to dilaton gravity. Calculation of spectral correlators for 2d dilaton gravity and analysis using random matrix ensembles.

In the context of holographic correspondence, integrable structures on Sasaki-Einstein-type manifolds $Y^{p,q}$ and $L^{p,q,r}$ following the chain Fuchsian equations, Heun equations and Painleve-type equations will be studied. Test of the holographic duality hypothesis using string dynamics on these manifolds. The focus will be on $Y^{p,q}$ spaces which can be used as internal manifolds for supersymmetric AdS5 or Schrodinger invariant IIB supergravity solutions.

Construction of analogs of super-Schwarzians and Schwarzian mechanics associated with $d=1$ superconformal algebras with extended supersymmetry, in particular, $osp(N|2)$, $su(1,1|N)$, $osp(4^*|4)$, $F(4)$. Study of what properties of super-Schwarzians can be extended to the case of $N>4$ supersymmetries.

Construction of a twistor description of massless fields with continuous spin in four-dimensional Minkowski space. Investigation of the transition from massless fields with continuous spin to massless fields with helicities in this description. Study of the dynamics of massless fields with continuous spin.

Derivation of universal formulas for the projectors onto invariant subspaces and the corresponding eigenvalues of the split Casimir operator in the tensor product of four adjoint representations of simple Lie algebras and Lie superalgebras. Construction of a matrix model that defines the interpretation of the diagrams corresponding to the split Casimir operator in the defining and adjoint representations as Feynman diagrams. Derivation of group factors of the diagrams of this model.

New methods in Geometric Quantization of synthetic type, unified vector and lagrangian approaches, based on the programme of Special Bohr-Sommerfeld geometry.

Inversion of operators related to generalizations of V.P. Maslov's quasiclassical approximations and topological properties of Liouville vector fields on open symplectic manifolds.

2. Construction and investigation of new types of static Q-cloudy black holes in the Einstein-Maxwell-Fridberg-Lee-Sirlin model.

Construction of $N=4,8$ supersymmetric extensions of systems with generic Kähler phase space.

Exploration of the integrability issues in the supersymmetric Euler-Calogero-Moser model and construction of the relevant set of integrals of motion.

Development of the BRST formalism for describing massless infinite spin fields and superfields in 6D space.

Working out the manifestly $N=(4,4)$ supersymmetric harmonic superfield approach to T-duality in the hyper-Kähler and quaternions-Kähler 2D sigma models.

Construction of the harmonic superspace formulation of $N=2$ superconformal higher spins and its reduction to AdS background.

Construction and investigation of new multi-soliton solution of the Skyrme-Maxwell theory.

Study of $N=4, d=1$ non-linear mirror multiplets of supersymmetric quantum mechanics and construction for them of Wess-Zumino-type Lagrangians and couplings to other $N=4, d=1$ mirror multiplets.

Construction of generalized lens elliptic gamma functions and proof that they describe the superconformal index of 4D $N=1$ supersymmetric theories on a product of a circle and a generalized squashed lens space.

3. Analysis of inflationary scenarios in scalar-tensor models of gravity, calculation of observable parameters such the slope of the primordial perturbation spectrum and the tensor-to-scalar ratio.

Investigation of photon orbits in the regime of a strong gravitational field in modified gravity theories and setting limits on the parameters of modified theories based on current observational data.

Study of quantum effects in scalar-tensor models of gravity and opportunities for their empirical verification.

Development of the FeynGrav package and its application to the computation of one-loop amplitudes in scalar-tensor gravity models. Investigation of the structure of divergencies in these models and the possibility of their ultraviolet extension.

Study of phenomenological theories of gravity containing higher derivatives of the Ricci scalar and the trace of the energy-stress tensor. Analysis of instabilities in this kind of theories and possibility to construct ghost-free and phantom-free subclasses. Investigation of possible cosmological consequences of these theories.

Investigation of gravitational bursts generated by null strings and setting limits on the parameters of such strings based on current observational data.

Analysis of the influence of the gravitational-wave background on physical processes available for observation.

Study of diffraction and interference of electromagnetic and gravitational waves against the background of null cosmic strings. Application of the Picard-Lefschetz theory for estimating the diffraction integrals arising from these problems. Investigation of the caustics of world surfaces of null cosmic strings by methods of the Arnold's theory of singularities of differentiable mappings.

Investigation of quantum fluctuations of an electromagnetic field against the background of anisotropic integrable optical profiles generalizing the classical "Maxwell's fisheye".

Development of a quantum field theory approach to the description of topological insulators.

Dubna International Advanced School of Theoretical Physics (DIAS-TH)

Theme leader: I.G. Pirozhenko

Rector of DIAS-TH: D.I. Kazakov

Participating Countries and International organizations:

Armenia, Austria, Belarus, Brazil, Bulgaria, Canada, China, CERN, Czech Republic, France, Germany, Greece, Hungary, India, Israel, Italy, Japan, Norway, Poland, Romania, Russia, Serbia, Slovakia, South Africa, Spain, Turkey, Ukraine, United Kingdom, USA, Vietnam.

The Bogoliubov Laboratory of Theoretical Physics (BLTP) has a good record of organizing international workshops and schools in Dubna. DIAS-TH organizes and supervises all educational programs for students, postgraduates, and young scientists at BLTP. It should function continuously and the standard short schools (about 3-4 a year) should be organized coherently. Other educational programs in Dubna such as the JINR University Center may also correlate with DIAS-TH (common programs on modern theoretical physics, workshops for students and young scientists, etc.).

The main goals of DIAS:

1. Training courses for students, graduates, and young scientists in the JINR Member States and other countries (according to special agreements and grants).
2. Looking for and supporting gifted young theorists in the JINR Member States; creating databases of students and young researchers.
3. Organization of schools of different levels in Dubna and coordination with similar schools in Russia, Germany, and other European countries.
4. Support of the JINR experimental programs by organizing lecture courses and review lectures on new trends in modern physics.
5. Cooperation with the JINR University Center in training students and postgraduates as well as in organizing schools for students.
6. Coordination of the research - training programs with workshops and conferences at JINR.
7. Coordination with the schools and workshops supported by the European
8. Participation in nets of workshops and schools in Europe.
9. Publication of lectures and discussions in different forms, in particular, with the use of modern electronic equipment, etc.
10. Supporting the WEB page of DIAS-TH which should become the organizing center of the programs related to DIAS-TH.

The main topics of the DIAS activity should be centered around the most important directions of research at BLTP: Theory of Fundamental Interactions; Nuclear Theory; Theory of Condensed Matter; Modern Mathematical Physics.

Expected results in the current year:

1. Organization at BLTP of three schools on theoretical physics for students, post-graduates and young scientists.
2. Organization of one-day lectures/discussions and regular seminars for students and post-graduates.
3. Computer processing of video records of lectures, support of digital archive of video records.
4. Support of Web-site of DIAS-TH.

Study of Fundamental Interactions in e^+e^- and Hadronic Collisions

Theme leader: A.S. Zhemchugov

Deputy: A.V. Guskov

Participating countries and international organizations:

Belarus, CERN, China, Germany, Italy, Poland, Russia, Sweden.

Issues addressed and main goals of research:

The Standard Model (SM) provides the most accurate and universal description of physics phenomena on a microscale nowadays. However, it is not free from a number of shortcomings. Some predictions of the Standard Model still have not been observed experimentally. In many cases the accuracy of predictions is limited by experimental knowledge of the key free parameters of the theory. At the same time, the search for New Physics beyond the Standard Model may show the way to further develop the theory and to get rid of its shortcomings. The main tool for these studies is collider experiments using both proton-proton (LHC) and electron-positron collisions. The latter are most suitable for precision studies of elementary particles with obvious advantages from well-defined kinematics of the initial state and the absence of the large QCD background typical of hadronic colliders. The precision test of SM predictions and search for new phenomena beyond the SM in charmonium and tau lepton decays are fulfilled in the scope of this theme using the world best facility in this energy domain - the unique electron-positron collider BEPC-II and the BES-III detector. At the same time, preparation for experiments at future electron-positron colliders (ILC, CLIC, CEPC, FCC-ee) is underway.

An important complement to the studies of e^+e^- collisions are the planned measurements at the AMBER experiment to address fundamental issues of quantum chromodynamics which are expected to lead to significant improvements in understanding of QCD as the present theory of strong interactions. AMBER (Apparatus for Meson and Baryon Experimental Research) is a new fixed-target experimental facility at the M2 beam line of the CERN SPS. The proposed measurements cover the range from lowest- Q^2 physics as the determination of the proton radius by elastic muon-proton scattering over average- Q^2 reactions to study hadron spectroscopy to high- Q^2 hadron-structure investigations using the Drell-Yan, charmonia, and prompt-photon production hard processes.

Expected results in the current year:

1. BES-III data analysis.
2. Development of offline software and analysis tools.
3. Development of a multipurpose MC event generator to describe the main processes of e^+e^- annihilation including radiative corrections at a level of more than one loop. The generator will take into account the particle polarization for both the initial and final states.
4. Development of standard program codes to calculate radiation corrections at a level of 2 (for EW interactions) and 3 (for strong interactions) loops.
5. Study of the research potential of the experiments at the CLIC, FCC, CEPC colliders in the domain of precision measurements and search for new physics on the basis of full detector simulation.
6. Development of proposals for the physics research program of the Super c-t Factory.
7. Test run to determine the proton radius by elastic muon-proton scattering.
8. R&D to develop a prototype of the Micromegas chamber of 50 cm x 50 cm followed by the test-beam studies.

ATLAS.

Upgrade of the ATLAS Detector and Physics Research at the LHC

Theme leader: V.A. Bednyakov

Deputies: E.V. Khramov
A.P. Cheplakov

Participating countries and international organizations:

Armenia, Azerbaijan, Belarus, Bulgaria, Canada, CERN, Czech Republic, France, Georgia, Germany, Israel, Italy, Netherlands, Russia, Slovakia, Spain, USA, Uzbekistan.

Issues addressed and main goals of research:

Absolutely new and unique data will be obtained in multifaceted and comprehensive research of proton-proton scattering processes. The analysis of these data will allow solving several fundamental physical problems. JINR scientists will participate in this analysis within this project.

It is expected to obtain new results and make publications on all above-mentioned tasks where JINR scientists have responsibilities. The most important tasks are the studies of the proton structure and hadron state spectrum, probing of the Standard Model at the LHC energies, search for and investigation of supersymmetry, search for the evidence of existence of new particles and new interactions. In addition, JINR intends to obtain new results that will help specify properties of already known elementary particles such as W - and Z -bosons, top quarks, heavy baryons, etc.

The implementation of this Project aimed at solving highly significant scientific problems will also bring unique applied results which may significantly change the quality of life. Among these results the experience in operation of remote monitoring systems for technically complicated devices, big data processing, development and practical use of distributed computing systems (GRID), and database monitoring applications in long-term large-scale experiments can be noted.

Expected results in the current year:

1. Investigation of applicability of the Standard Model and verification of SM predictions (including interactions of heavy ions), determination of the structure of the proton at ultra-high energies (PDFs), tuning and improvement of relevant computer codes and event generators, etc.
2. Search for the chiral Z^*/W^* bosons in two-jet decays and in a process with more complex topology of their associative production including heavy b and t quarks.
3. Search for (supersymmetric) charged Higgs bosons via their specific decay modes (3-lepton, etc.).
4. Analyses of associated productions of the SM Higgs with the top-antitop pair and search for production with a single top.
5. Search for a valence-like nonperturbative component of heavy quarks in the proton (intrinsic heavy quarks) via specific final state topology in the pp interactions.
6. Search for new hadrons and baryons containing heavy c and b quarks and study of their properties.
7. Measurement of the Drell-Yan triple-differential cross section and effective leptonic weak mixing angle in the Z -boson decay.
8. New comprehensive study of the gluon structure of the proton, etc.
9. Search for quantum black holes in the lepton+jet channel at 13 TeV.
10. Participation in development of event trigger indexing infrastructure.
11. Development and maintenance of the TDAQ system.
12. Development of database monitoring applications.

Search for New Physics in the Lepton Sector

Theme leaders: V.V. Glagolev
Z. Tsamalaidze

Participating countries and international organizations:

Belarus, Bulgaria, Czech Republic, France, Georgia, Germany, Italy, Japan, Kazakhstan, Russia, Slovakia, Switzerland, Ukraine, United Kingdom, USA.

Issues addressed and main goals of research:

The COMET experiment at J-PARC, the Mu2e experiment at Fermilab and the MEG II experiment at PSI are a dedicated search for the CLFV processes $\mu^- N \rightarrow e^- N$, $\mu^+ \rightarrow e^+ \gamma$. Once neutrino masses are included, the process is allowed but still unobservable since the rate is proportional to $(\Delta m_{ij}^2/M_W^2)^2$, where Δm_{ij}^2 is the mass difference squared between *i*th and *j*th neutrino mass eigenstates, and M_W is the mass of the W boson. The predicted rates for the $\mu^- N \rightarrow e^- N$ and $\mu^+ \rightarrow e^+ \gamma$ CLFV processes are less than 10^{-50} each. This makes this process a very theoretically clean place to search for NP effects. In many NP models that include a description of neutrino mass, the rates for these processes are enormously enhanced so that they occur at a level to which the COMET and Mu2e experiment will have sensitivity. The conversion measurement at the level of 10^{-17} , which is COMET's goal, will be 10000 times better than the current experimental limit $B(\mu^- + Au \rightarrow e^- + Au) < 7 \cdot 10^{-13}$ from SINDRUM-II at PSI.

The T2K experiment is the first to study the mechanism of CP-symmetry breaking in the lepton sector, which is experimentally manifested in the difference between oscillation probabilities of neutrinos and antineutrinos. The observation of CP-symmetry breaking in neutrino oscillations together with nonconservation of the lepton number can serve as an argument in favor of explaining the baryon asymmetry of the Universe through the mechanism of leptogenesis (leptogenesis is a process of the appearance of lepton-antilepton asymmetry (nonzero lepton number) in the early stages of the formation of the Universe). On the basis of data of the T2K experiment, the observation of CP violation with a significance of 3σ or higher is expected in the case of large CP violation, as well as the measurement of neutrino mixing parameters, θ_{23} and Δm_{32}^2 , with an accuracy of 1.7° or better and 1%, respectively.

Expected results in the current year:

1. Participation in preparation, engineering, and physics run, data acquisition and analysis of Phase-a.
2. Finalization of assembling, testing, calibration, installation, cosmic test and maintenance of the straw detector for Phase-I.
3. R&D program for production of straw tubes with a 12-mm wall thickness and 5 mm in diameter. Creating a straw prototype (64 channels) with new tubes (12 mm, 5 mm) and measurements with the beam.
4. Test (certification) of LYSO crystals to be used in the calorimeter. Development and optimization of the crystal calibration method for the COMET calorimeter. Participation in calorimeter designing, assembling, installation, cosmic test, and maintenance.
5. Participation in assembly and maintenance of the CRV for Phase-I.
6. Participation in assembling, testing, installation, and maintenance of the whole detector system for Phase-I.
7. Complex detector system (tracker, calorimeter etc.) simulation.
8. Participation in engineering and physics run, data acquisition and analysis.
9. Tests of CsI and BaF_2 electromagnetic calorimeter elements with gamma sources and the electron beam.
10. Manufacture and installation of electronics of the Super FGD photodetector calibration system.
11. Assembly of the SuperFGD as part of the Near Detector of the T2K experiment using a unique box support and top access systems.
12. Preparation of the launch of the Near Detector of the T2K experiment, participation in engineering and operation runs, taking of new data and analysis.
13. Investigation of systematic uncertainties for measuring δ_{CP} .

14. Search for manifestations of new physics in the T2K data including the search for light dark matter.
15. Filling the batch of Mu2e scintillation counters with CKTN and testing them for leakage.
16. Maintenance of the visualization and control software.
17. Development and tests of Mu2e electromagnetic calorimeter preamplifiers at JINR.
18. Participation in radiation hardness tests of detector elements.
19. Participation in development of a positron tracker for the MEG-II experiment, DAQ, data analysis.
20. Participation in data taking and analysis of experimental data obtained with CERN hadron beams.

Study of Neutrino Oscillations

Theme leaders: D.V. Naumov
A.G. Olshevskiy

Participating countries and international organizations:

China, Czech Republic, France, Germany, Japan, Italy, Romania, Russia, Slovakia, Switzerland, Turkey, USA.

Issues addressed and main goals of research:

1. Measurement of the neutrino mixing angle θ_{13} and the squared mass difference Δm^2_{ee} in the Daya Bay experiment.
2. Neutrino mass hierarchy determination and measurement of the CP violation phase of the neutrino mixing matrix in the JUNO and NOvA experiments.
3. Measurement of solar neutrino fluxes, search for the sterile neutrino state and new particles.
4. Study of tau neutrino production in proton-nuclear interactions at the CERN SPS.
5. Development of detector systems of the DUNE ND.

Expected results in the current year:

1. Physics analysis of the Daya Bay experiment data on determination of θ_{13} and other oscillation parameters.
2. Estimation of the mass hierarchy measurement precision in the JUNO experiment with the TAO Near Detector.
3. Tests of detection elements and electronics of JUNO/TAO.
4. Installation and commissioning of the JUNO detector (PMT, HV, TT-veto).
5. Using of the NOvA Remote Operation Centre at JINR for shift working, mass testing of JUNO PMTs with scanning stations.
6. Data analysis in the NOvA experiment, new results considering the hierarchy and CP monitoring of the JUNO veto system planes with cosmic muons.
7. Preparation of prototype tests of DUNE ND detector systems.
8. Development of the GNA project: GPU support and automatic differentiation.
9. Preparation of the full physics run and data analysis of the pilot run data, development of algorithms of charm particles decay search in high track density conditions.
10. Analysis of solar neutrino parameters and search for rare processes in the Borexino detector, the DS-50 data analysis.

PANDA Experiment at the FAIR Accelerator Complex

Theme leader: G.D. Alexeev

Deputies: A.N. Skachkova
A.S. Vodopyanov

Participating countries and international organizations:

Belarus, CERN, Germany, Italy, Russia.

Issues addressed and main goals of research:

The study of exotic nuclear-matter states and the nucleon structure in the PANDA experiment at FAIR. Start of construction of the PANDA muon detector.

Expected results in the current year:

1. Signing of the FAIR-JINR contract on the muon system construction.
2. Preparation of a mass production workshop for MDT detectors.
3. Finalizing of electronics design.
4. Calibration of prototypes at CERN and JINR for all types of particles in the energy range of 0.5-10 GeV.
5. Development of particle identification algorithms (PID) tuned on the basis of beam test results.

Astrophysical Researches with the TAIGA Experiment

Theme leader: A.N. Borodin

Deputy: L.G. Tkachev

Participating countries and international organizations:

Italy, Japan, Mexico, Republic of Korea, Romania, Russia.

Issues addressed and main goals of research:

1. Search for local galactic sources of gamma rays with energies above 20-30 TeV.
2. Study of gamma rays fluxes from known sources in the same energy region.
3. Search for diffuse gamma rays from the galactic disk.
4. Study of the energy spectrum and the mass composition of cosmic rays in the energy range of 10^{15} to 10^{17} eV in order to detect spots of Lorentz invariance violation.
5. Search for galactic PeVatrons.
6. The TAIGA observatory also plans to introduce a "hybrid method" of observation - the combined use of IACT and HiScore wide angle Cherenkov detectors. This method will not only significantly improve the quality of high-energy gamma-rays emission signal selection from background hadron events, but will also help to match currently available parts of the cosmic ray spectrum obtained by ground-based and orbital detectors.
7. In the NUCLEON space experiment, the spectra and elemental composition of cosmic rays were measured in the energy range of 10^{11} - 10^{15} eV. Further progress in applying this technique is the planned OLVE-HERO experiment. The unique parameters of the detector within 5 years of direct extra-atmospheric measurements will provide data, large statistics which allow identifying changes to the cosmic ray composition at an energy up to 10^{16} eV and measuring angular anisotropy of cosmic rays.

Expected results in the current year:

1. Design, manufacturing, and testing IACT telescopes for the TAIGA experiment.
2. Development of event simulation programs in the TAIGA experiment. Upgrade of software for collectioning and processing data for the IACT telescopes, as well as for their hybrid mode of operation in conjunction with HiScore detectors.
3. MC simulation of the joint operation of IACT telescopes and the TAIGA observatory's wide-angle Cherenkov detectors and optimization of selection of gamma rays events from the background.
4. Monitoring of the brightest gamma-ray sources in a hybrid mode at the TAIGA observatory. Upgrade of software for the IACT data analysis.
5. Completion of the data analysis of the TUS space experiments.
6. Design and beam tests of OLVE-HERO prototypes.
7. Study of the Crab Nebula gamma radiation in the energy range of 2-10 TeV. Observation of the brightest extragalactic sources of gamma radiation Mrk-421, Mrk-501.

Investigations of Compressed Baryonic Matter at the GSI Accelerator Complex

Theme leaders: V.P. Ladygin
V.V. Ivanov

Deputy: O.Yu. Derenovskaya

Participating countries and international organizations:

Czech Republic, France, Germany, Poland, Romania, Russia.

Issues addressed and main goals of research:

Development and testing of detector prototypes based on the drift tubes and scintillation counters with SiPM readout for experiments at NICA with possible use in the CBM experiment at the FAIR/GSI accelerator complex. Preparation of publications on magnetic and force calculations for a superconducting dipole magnet. Study of the dynamics of multiple particle production in heavy ion collisions in the collider mode. Adaptation of advanced algorithms and software for triggering, modeling and data analysis for projects at NICA.

Expected results in the current year:

1. Development and testing of prototype detectors based on drift tubes and scintillation detectors for SPD.
2. Publication of results for magnetic and force calculations for the superconducting dipole magnet of the CBM experiment.
3. Adaptation of advanced algorithms and software for triggering and data analysis for SPD.
4. Simulation of the multiparticle dynamics in heavy ion collisions.
5. Application of advanced mathematical methods and fast computational algorithms for data analysis and selection of signal events for projects at NICA.
6. Adaptation of tracking and data analysis algorithms at HADES to fast online selection at SPD.
7. Theoretical support for NICA initial phase experiments.

Study of Rare Charged Kaon Decays and Search for Dark Sector in Experiments at the CERN SPS

Theme leader: V.D. Kekelidze
Deputies: D.V. Peshekhonov
 D.T. Madigozhin

Participating countries and international organizations:

Belarus, Belgium, Bulgaria, Canada, CERN, Chile, Czech Republic, Germany, Italy, Mexico, Romania, Russia, Slovakia, Switzerland, United Kingdom, USA.

Issues addressed and main goals of research:

Realization of the NA62 Project allows to clarify the CP-violation problem, to measure precisely very rare charged kaon decay to charged pions and two neutrinos, to carry out a search for supersymmetric particles and their partners to observe physics beyond the Standard Model. In addition, the characteristics of rare kaon and hyperon decays will be improved. Straw-detectors of the NA62 high resolution magnetic spectrometer working in vacuum will be supported during experimental runs. Development of a new detector prototype based on straws with a smaller diameter will be started to use it at higher intensity of the beams. Software for simulation, data analysis and processing will be developed.

The main objective of the NA64 experiment is to search for new physics beyond the SM, namely the search for the dark photon (A'), hypothetical boson with 16.7 MeV mass and other manifestations of the dark sector in the experiments on the CERN SPS electron and muon secondary beams. Tracking detectors based on the straw tube technology support. Software for data MC simulation and analysis will be developed. Data analysis will be provided.

Expected results in the current year:

In frame of NA62

1. NA62 and NA48/2 data analysis will be carried out.
2. Software for the simulation of the magnetic spectrometer and full set-up will be developed; system for detector calibration and event reconstruction will be upgraded; general software of the experiment will be developed.
3. Calibration and testing of the NA62 straw detectors will be carried out.
4. Participation in the NA62 experimental run at the CERN SPS.

In frame of NA64

1. NA64, analysis of the experimental data.
2. Development and putting into operation of new track stations based on 6~mm straw tubes. Operation and support of the detectors.
3. Participation in NA64 experimental runs in the new experimental zone on the H4 and muon SPS channels, CERN.
4. On-line and off-line software development, for the straw chambers analysis and for the DAQ experiment in particular.
5. Participation in the data taking at the CERN SPS.

CMS. Compact Muon Solenoid at the LHC

Theme leader: V.Yu. Karjavin

Scientific leader: I.A. Golutvin

Participating countries and international organizations:

Armenia, Austria, Belarus, Belgium, Brazil, Bulgaria, CERN, China, Croatia, Cyprus, Czech Republic, Estonia, Finland, France, Georgia, Germany, Greece, Hungary, India, Iran, Ireland, Italy, Lithuania, Mexico, Montenegro, Netherlands, New Zealand, Pakistan, Poland, Republic of Korea, Russia, Serbia, Spain, Switzerland, Taiwan, Turkey, United Kingdom, USA, Uzbekistan.

Issues addressed and main goals of research:

The CMS Collaboration has constructed a general-purpose detector to be operational at the start-up of the Large Hadron Collider (LHC/CERN) to exploit its full discovery potential. Study of fundamental properties of the matter in Super High Energy proton-proton and nucleus-nucleus interactions.

The major activities of JINR are focused on the following directions:

- hadron calorimetry, including endcap hadron;
- forward muon stations with cathode strip chambers;
- development and realization of Physics program to test SM and BSM.

Expected results in the current year:

1. Processing and analysis of experimental data, development and improvement of muon and jet reconstruction algorithms.
2. Upgrade and technical support of the CMS detectors.
3. CMS shifts, data taking, and data quality monitoring.
4. Development of software for GRID-based distributed system for data processing and analysis. Data transmission between CMS Tier-1/Tier-2 and JINR.

List of projects

Studies of the Nucleon and Hadron Structure at CERN

Theme leaders: A.V. Guskov

Participating countries and international organizations:

CERN, Czech Republic, France, Germany, India, Israel, Italy, Japan, Poland, Portugal, Russia, Taiwan, USA.

Issues addressed and main goals of research:

Studies of the generalized parton distributions in various exclusive processes. Study of the mechanisms of exclusive production of photons, pions and vector mesons in the processes of deep inelastic scattering of muons on nuclei (DIS) and in processes of deep inelastic virtual Compton scattering (DVCS). Measurements of the polarizability of a pion. Study of the structure of nucleons in Drell-Yan processes. Study of inclusive and semi-inclusive processes in DIS reactions of muons and hadrons on polarized targets.

1. Measurements of the structure functions of a nucleon, polarized parton distributions of nucleons.
2. Measurements of the structure of nucleons in muon pair production (Drell-Yan, J/Psi).
3. Spin effects in hadron interactions at 0.3-3.0-GeV.
4. Study of the mechanisms of exclusive production of photons, pions and $\rho\rho$ -mesons in DIS and DVCS processes.
5. Measurement of the Primakoff reactions cross sections.
6. Creation and development of a set of programs for modeling and data processing. System support for CERN software.
7. Preparation of detectors for the COMPASS-II spectrometer.

Expected results in the current year:

1. Measurement of π^0 production in the processes of exclusive deep inelastic scattering of muons on a hydrogen target.
2. Measurements of Collins and Sivers asymmetry on hydrogen and deuterium targets.
3. Measurement of semi-inclusive scattering on hydrogen and deuterium targets with 2 hadrons production.
4. Measurement of transverse spin asymmetries in semi-exclusive scattering processes.
5. Software development and modeling of various reactions studied on the COMPASS-II spectrometer. Analysis of data in JINR and preparation of publications.
6. Theoretical studies on the program COMPASS-I and COMPASS-II.
7. Extraction of spin asymmetries from the 2022 run data of Semi-Inclusive Deep-Inelastic Scattering (SIDIS) of muons off transversely polarized ^6LiD target.

Strangeness in Hadronic Matter and Study of Inelastic Reactions Near Kinematical Borders

Theme leaders: E.A. Strokovsky
E.S. Kokoulina
D.O. Krivenkov

Participating countries and international organizations:

Belarus, Czech Republic, Japan, Russia, Slovakia, Ukraine.

Issues addressed and main goals of research:

Strangeness in hadronic matter and study of boundary effects:

- study of stabilizing effects of strangeness in nuclear matter and properties of the lightest hypernuclei;
- study of multi-particle dynamics in the inelastic proton-proton and proton-nucleus interactions with extremely high multiplicity;
- study of spectra and yields of soft photons in the deuteron-nucleus and nucleus-nucleus interactions.

Expected results upon completion of the theme stages or projects:

1. Experimental conclusion about the existence of the hypernucleus ${}^6_{\Lambda}\text{H}$.
2. New experimental data on the properties of the lightest hypernuclei and experimental verification of corresponding theoretical models for these hypernuclei.
3. New experimental data on the drip-line location for loosely bound light hypernuclei with high neutron excess, necessary for the development of the theory of neutron-rich hyper nuclei and models of their production in non-central nucleus-nucleus interactions.
4. New experimental data on the production of strangeness and vector mesons (including those, containing strange quarks) by polarized photons (close to the relevant thresholds).
5. Measurement of the measured energy spectra of gamma-quanta (in the energy range up to several MeV), produced in the interactions of different nuclear beams (from deuterium to heavy nuclei) of Nuclotron with various nuclear targets, with theoretical predictions depending on the multiplicity of charged and neutral particles, as well as on the photon emission angle; verification of various physical hypotheses about the mechanisms of production of "direct" photons in the nuclear interactions.
6. Production of an electromagnetic calorimeter prototype for detecting soft photons and testing it on the "Alpom" facility and the "MiniSPD" test bench.

Expected results in the current year:

1. Data taking for ${}^6_{\Lambda}\text{H}$ search using beam of ${}^7\text{Li}$ nuclei. Analysis of the first experimental data for the ${}^6_{\Lambda}\text{H}$ search and for the measurements of hyperhydrogen isotopes ${}^6_{\Lambda}\text{H}$ and ${}^4_{\Lambda}\text{H}$ lifetimes.
2. Upgrade of the HyperNIS magnetic spectrometer (tracking system) by adding the planes of GEM detectors. These detectors, which have already been (partially) purchased and are being tested at the HyperNIS setup by staff, will be integrated into this setup to improve accuracy of the hyper nucleus decay vertex determination. Preparation of a project for joint experiments with SRC, integration of detectors, development of a technical design for a spectrometer with two magnets (installations of a second magnet, supply of communications, supports for detectors), common data acquisition systems (design and tests), MC for the optimal geometry of joint detectors.
3. Within the collaboration with Japan: data taking at LEPS/LEPS2 setups on the production of strangeness and vector mesons (including those, containing strange quarks) by polarized photons (close to the relevant thresholds); analysis of data on such reactions, taken before.

4. Development of silicon photomultipliers (SiPM) for a compact soft photon spectrometer based on the Gadolinium Gallium Garnet (GaGG:Ce). Investigation of the percentage ratio of the Cu-W components of the composite material as radiators of the soft photon calorimeter. Manufacture of silicon photomultipliers (SiPM) at "Integral" holding (Minsk). Development and manufacture of a calibration device based on a picosecond solid-state laser in cooperation with the PFP Research Institute (Minsk).
5. Participation in the simulation of the calorimeter use in the SPD setup for the task of direct photon registration, within the development of the SPD physical program with polarized beams of light nuclei and protons. Participation in works on simulation of the polarimeters (to be created) for experiments with polarized beams at the VBLHEP accelerator complex.
6. Preparing a new project to replace the one being completed.
7. Comparison of the average of the transverse and longitudinal momentum components of charged particles as a function of multiplicity. Determination of the critical multiplicity at which the components become indistinguishable and establishing its connection with the pion condensate region.

**NICA Complex: Design and Construction of the Complex
of Accelerators, Collider and Physics Experimental Facilities
at Extracted and Colliding Ion Beams Aimed at Studying Dense
Baryonic Matter and the Spin Structure of Nucleons and Light Ions,
and at Carrying out Applied and Innovation Projects**

Theme leaders: V.D. Kekelidze
A.S. Sorin
G.V. Trubnikov

Deputies: A.V. Butenko
V.M. Golovatyuk
M.N. Kapishin

Participating countries and international organizations:

Armenia, Australia, Azerbaijan, Belarus, Bulgaria, CERN, Chile, China, Cuba, Czech Republic, Egypt, France, Georgia, Germany, Israel, Italy, Japan, Mexico, Moldova, Mongolia, Poland, Romania, Russia, Serbia, Slovakia, South Africa, Sweden, Ukraine, USA.

Issues addressed and main goals of research:

Search and investigation of phase transitions in strongly interacting nuclear matter at extremely high baryon densities, study of the nucleon spin structure, of light nuclei and polarization phenomena in few nucleon systems. Development of theoretical models of the studied processes and theoretical support of the experiments. Development of the Nuclotron accelerator complex as a basic facility for studying relativistic nuclear collisions in the range of atomic masses $A = 1 \div 197$. Investigation of reaction dynamics and studying modifications of hadron properties in nuclear matter, near-threshold strange hyperons production and search for hyper nuclei in interactions of the Nuclotron extracted ion beams with fixed targets at the BM@N detector. Investigation of the nuclear structure at short internucleon distances at the BM@N detector. Development and stage-by-stage creation of the NICA heavy ion collider accelerator complex, the multi-purpose detector (MPD/NICA) and spin physics detector (SPD/NICA) for experiments with colliding heavy ions beams. Modernization of extraction beam lines. Carrying out of experiments with ion beams and polarized proton and deuteron beams at the Nuclotron. Development of the infrastructure for applied research at NICA heavy ion beams.

Expected results in the current year:

1. Development and expansion of the physical programme presented in the "White Paper" of the NICA project. Obtaining new theoretical results for processes of strong interactions in the non-perturbative QCD region, development and tests of models for nuclear matter properties descriptions at extremely high temperatures and densities, investigation of possible nuclear matter states and nuclear collision dynamics at extreme baryonic densities as well as observation of these phenomena in P-odd effects and spin asymmetries.
2. Completion of the planned tasks within the Nuclotron-NICA project: assembly and testing of the main subsystems. Development of beam diagnostics systems. Increasing the intensity of the beam from the SPI polarized particle source. Preparation of the Nuclotron for solving first-priority tasks of the NICA program within available running time. Technical design on the SC resonator prototype for the proton linacs. Design of new proton and light ion linear accelerator LILAC.
3. Commissioning of the HILAC linear accelerator ($z/A \geq 0.14$), achieving its design parameters. Development and upgrade of the engineering infrastructure. The Booster tests and physics beam runs.
4. Tests of the elements of the beam extraction and transportation system from the Booster to Nuclotron. Manufacturing the elements of beam transfer system from Nuclotron to Collider.

5. Completion of the tunnel building works for installation the NICA collider elements and systems.
6. Preparing the BM@N set-up for the physics run with a heavy ion beam extracted from the Nuclotron. New data collection with a heavy ion beam at BM@N. Analysis of new experimental data collected at BM@N.
7. Construction and tests of the MPD setup systems in accordance with the work schedule. Serial production of the start option detectors.
8. Preparation of the technical project of the SPD experiment. Development of the physics motivation, modeling, optimization of the set-up configuration, including continuation of theoretical studies of charmonia production processes in polarized proton and deuteron collisions.
9. Increase in computing power of the NICA computing cluster and upgrade of its infrastructure.
10. Completion of manufacturing and tests the NICA lattice collider magnetic system elements.
11. Put the new cryogenic-compressor station and cryogenic facilities in building 1b.
12. Reconstruction of the Measuring hall for the applied channels system.
13. Completion of equipment installation at applied research channels, at the station for irradiation of electronic components and biological objects with long-range ions and at the station for irradiation of electronic components with low-energy ions.
14. Expert assessment of the technology solutions used during development of the beamlines for applied research, of stations for irradiating electronic components and biological objects with long-range ions and of stations for irradiating electronic components with low-energy ions. Formulation of proposals for the development of beamlines and irradiation stations for applied research.
15. Preparation of the program of the first experiments on beamlines for irradiation of electronic components and biological objects.

Advanced Studies of Systems of New-Generation Accelerators and Colliders for Fundamental and Applied Research

Theme leader: G.D. Shirkov

Participating countries and international organizations:

Belarus, CERN, Georgia, Germany, Italy, Russia, Slovakia.

Issues addressed and main goals of research:

Investigation of various carbon-based transmission photocathodes, installation of the second beamline with a 213-nm laser at the photogun bench, development of the photoinjector bench: 150-KeV electron energy achievement, development of radiation safety, interlock and control systems. Development, determination of design parameters and commissioning of the LINAC-200 linear electron accelerator with the aim of its experimental and educational applications. Optimization of accelerator parameters for users. Maintenance of the FLASH infrared undulator and participation in its experimental program, as well as in the new undulator development; development of photon diagnostics for FLASH, FLASH2 and XFEL and experiment participation. Experimental investigations of 3D ellipsoidal shape electron bunches with small emittances at PITZ with the new laser system. Preparation of proposals and start of JINR participation in international collaborations on future high-energy colliders.

Expected results in the current year:

1. Fabrication of the nanostructured carbon photocathodes and investigation of their electrophysical properties ($\lambda = 213 / 266$ nm). Assembling of the pepper-pot emittance measurement system main components for the photoinjector bench. Vacuum system assembling and pumping. Design, fabrication and assembling of a cryopump for the bench vacuum system. Assembling, tuning and calibration of the nanosecond range high-sensitivity electron bunch charge sensor prototype. Bench startup with the energy of 120 keV.
2. Optimization of the LINAC-200 beam parameters at 200 MeV. Extraction of the beam with wide-range parameters from single electrons to 30 mA with the repetition rate up to 25 Hz into the atmosphere, optimization of beam parameters for users. Manufacturing of the beam parallel transfer system (DLNP program) after the 2nd and 3rd accelerating stations. Modernization of the cooling, control and interlock systems.
3. Investigation of the electron beam and FEL physics: generation of infrared radiation from the JINR undulator at FLASH and measurements of a longitudinal bunch profile on the basis of this radiation; diagnostics of electron bunches at FLASH2 by using microchannel plate detectors; test experiments with XFEL microchannel plate detectors on the PETRA III synchrotron sources, experimental investigations of the 3D ellipsoidal shape electron bunches at PITZ with the new laser system.
4. Preparation of proposals for JINR participation in international collaborations on future high-energy colliders. Analysis of 6-T high-efficient dipole magnets aimed at the FCC "low energy" pp-collider option at CERN.

Study of Polarization Phenomena and Spin Effects at the JINR Nuclotron-M/NICA Facility

Theme leader: E.A. Strokovsky

Deputies: N.M. Piskunov
V.P. Ladygin
R.A. Shindin

Participating countries and international organizations:

Bulgaria, Czech Republic, France, Germany, Japan, Poland, Romania, Russia, Slovakia, Sweden, United Kingdom, USA, Uzbekistan.

Issues addressed and main goals of research:

Polarization studies are undoubtedly relevant now. They combine the efforts of the JINR Laboratories and many foreign laboratories, both participating and non-participating countries, in the design and conduct of experiments using unique beams of polarized deuterons with energies ranging from 5 MeV per nucleon to 5.6 GeV/n, secondary beams of polarized protons and neutrons, as well as beams of polarized protons directly accelerated in the Nuclotron. The possibility of obtaining beams of accelerated polarized protons in the Nuclotron without significant investment, demonstrated in 2017, became the basis for intensifying work on the spin program of the NICA project and, in particular, for the development of polarimetry techniques, the creation of new methods for precise control of the direction of the spin of protons, deuterons and other particles. This part of the work on the topic is directly related to the creation of the NICA complex and the testing of a new approach to controlling the polarization in the spin transparency mode. Of undoubted interest is also the study of the possibility of setting up experiments at the collider to measure EDM and parity violation. The most important scientific and methodological direction of work within the framework of the topic is the development of infrastructure for conducting research with polarized beams, namely: the creation and development of systems for polarimetry and spin direction control. At the forthcoming stage of work, due to the concentration of efforts on the implementation of the NICA project, this component also has the first priority. Within the framework of the theme, two projects are being carried out: ALPOM-2 and DSS. Preparation of the project on spin effects measurements in nucleon-nuclear scattering with using Movable Polarized Target Saclay-ANL-JINR (MPT) and Delta-Sigma and Delta-2 spectrometers. Extension proposals for these projects for 2019-2023. were reported at the STC VBLHEP in April 2021 and approved with a recommendation to assign the first priority to these works. Taking into account the presence of polarized beams, new experimental data will be obtained on the study of charge-exchange processes, on the study of the structure of 2- and 3-nucleon correlations in the reactions of deuteron-proton elastic scattering and deuteron breakup (experiments on the internal target of the Nuclotron), by measuring tensor analyzing power and spin correlation in the dp scattering reaction in the deuteron core region, as well as other processes that are important for the development of theoretical models describing the interactions of the simplest nuclear systems with allowance for relativism and the contribution of the meson and quark-gluon components of the internal motion of constituents in nucleons.

Expected results in the current year:

1. Works:
 - a) testing a low-energy polarimeter for protons and deuterons on the injection channel into the Nuclotron;
 - b) designing a polarizing helium-3 target;
 - c) modernization of the polarimeter at focus f3.
2. Carrying out work on approved projects and agreements, taking into account their resource availability, including ALPOM-2 and DSS projects. Completion of the data analysis on the analyzing powers A_y , A_{yy} and A_{xx} in deuteron-proton elastic scattering at the energies 400-1300 MeV. Publication and reports of the results.
3. Creation of a project for the placement of polarimetry elements for beam diagnostics and polarization control at the SPD section of the NICA collider ring.
4. Modernization of the MPT. Preparation of the Delta-Sigma and Delta-2 spectrometers. Carrying out calculation and design work on detector around target (DTS).

5. Continuation of the development of new calculation methods of the amplitudes and polarization characteristics of deuteron fragmentation and deuteron elastic scattering on protons and nuclei taking into account FSI and relativistic effects.
6. Analysis of the possibility of staging new experiments with polarized beams of protons and deuterons at the NICA complex, in particular, on the search for EDM.

Research on Relativistic Heavy and Light Ion Physics. Experiments at the Accelerator Complex Nuclotron-M/NICA at JINR and CERN SPS

Theme leader: A.I. Malakhov
Deputy: S.V. Afanasiev

Participating countries and international organizations:

Armenia, Bulgaria, CERN, China, Czech Republic, Germany, Japan, India, Mongolia, Poland, Romania, Russia, Slovakia, Switzerland, USA, Uzbekistan.

Issues addressed and main goals of research:

Study of new phenomena in multiple particle productions associated with the manifestation of the quark and gluon degrees of freedom in the interaction of relativistic nuclei. Study of nucleon and nuclear interactions at the VBLHEP accelerator complex, CERN SPS. Energy scan of interactions of nuclei at 20-158 GeV/nucleon energies and the study of their dependence on the atomic number of nuclei. To search for the critical point on the phase diagram of nuclear matter at the NA61/SHINE (SPS, CERN). Study of hadron production in hadron-nucleus interactions. Use of the obtained data for the precision calculations of neutrino spectra and fluxes in the accelerator experiments to study the neutrino oscillations. Investigation of nucleon clustering and the contribution of unstable nuclear-molecular States to the dissociation of light stable and radioactive isotopes, as well as the properties of rarefied baryonic matter in the dissociation of heavy nuclei. Experimental and theoretical study of deep subthreshold, cumulative processes, the formation of hadrons and antimatter in the transition energy region. Investigation of processes in the region of large P_T ($P_T \geq 1$ GeV/c) in non-cumulative and cumulative kinematic regions at SPIN and FODS setups. Study of the behavior of elementary particles, nucleon resonances and nucleon fluctuations in nuclear matter on the SCAN spectrometer. Preparation of proposals of the experiments at the VBLHEP accelerator complex on the Nuclotron extracted beams and NICA Collider. Study of the short-range nucleon-nucleon correlations and the cluster structure of the nuclei using the beams of ions, polarized protons and deuterons at the internal target of the Nuclotron in the framework of the SCAN-3 project.

Expected results in the current year:

1. Investigation of new phenomena in multiple particle productions associated with the manifestation of the quark and gluon degrees of freedom.
2. Preparation and performance of the experiments on the internal and extracted Nuclotron beams.
3. NA61/SHINE data analysis (SPS, CERN). Study of hadron production in hadron-nucleus interactions. Use of the obtained data for the precision calculation of neutrino spectra and fluxes in the accelerator experiments to study the neutrino oscillations. Modernization of the TOF system. Configuration and testing of the three-arms SCAN magnetic spectrometer. Modernization of electronics for data taken. Analysis of experimental data.
4. Analysis of the experimental data on the processes of the multiple emission of intermediate mass fragments on the beams of relativistic light ions using a 4- π PHASE-3 setup for the registration of nuclear fragments. Performing data analysis to determine the mechanism of multifragmentation and to obtain new information about the nuclear phase transitions "liquid-fog" and "liquid-gas". Investigation of properties of hot nuclei formed in the collisions of light relativistic ions with heavy targets. Production of the detector system for the registration of the decay of hypernuclei.
5. Verification of the consequences of the principles of self-similarity and weakening of correlations in the formation of multiple particles.
6. Upgrade of the SCAN setup. Analysis of the experimental data on the behavior of nucleon resonances and nucleon fluctuations in nuclei, on the search and study of properties of the bound state-meson in nuclear matter, study of np and pp correlations. Modernization of the Internal target station of the Nuclotron.
7. Search and study of the Hoyle state and more complex nuclear-molecular States in the dissociation of light nuclei. Analysis of the isotopic composition of the fragmentation of heavy nuclei. Use of automated microscopes, as well as improvement of the NE technology.

8. Updating the Marusya installation for conducting the experimental studies with the extracted Nuclotron beams. Investigation of A-dependences of rare subthreshold and cumulative processes of the formation of pions, kaons and antiprotons depending on the type and energy of the incoming nuclei, the momentum and angle of the detected particles. Carrying out correlation experiments with registration of groups of particles in the final state, one of which is cumulative.
9. Collection, processing and digitization of the film information obtained using bubble chambers and in electronic experiments with fixed targets under the conditions of registration of multiple birth of particles in the energy range of 1-300 GeV.
10. Use of heavy and light ions for applied research.
11. Analysis of the experimental data obtained in the PHENIX experiment.
12. Processing of the experimental data from 5-9 Runs at the PHENIX setup. Participation in the formation of the program for e-RHIC.
13. Preparation of a project to study spin asymmetries at the LHEP accelerator complex.
14. Collection of new experimental data in pA- and AA-interactions in the region of large p_T ($p_T \geq 1$ GeV/c) at SPIN and FODS facilities, data processing and publication of results.
15. Refinement of the results obtained on a propane two-meter chamber, and analysis of data on the results of the NA61/SHINE experiment.

Investigation of the Properties of Nuclear Matter and Particle Structure at the Collider of Relativistic Nuclei and Polarized Protons

Theme leaders: R. Lednicky
Yu.A. Panebratsev

Participating countries and international organizations:

Azerbaijan, Bulgaria, Czech Republic, France, Germany, Poland, Russia, Slovakia, USA.

Issues addressed and main goals of research:

Investigation of the properties of nuclear matter with extremely high density and temperature, search for the signatures of the quark deconfinement and possible phase transitions at the collisions of heavy nuclei at the energies of the Relativistic Heavy Ion Collider (RHIC). Measurement of spin dependent structure functions of nucleons and nuclei using polarized proton beams at RHIC.

Expected results in the current year:

1. Beam Energy Scan-II data analysis for collider mode and fixed target measurements.
2. Study of spin effects in collisions of transversely polarized protons at 510 GeV and forward rapidities.
3. Study of event structure, collective variables, correlation characteristics, femtosopic correlation functions and high- p_T processes.
4. Study of future possibility of investigation of the nuclear structure and the proton spin in $e-p$ and $e-A$ collisions at colliders.
5. Participation in joint educational programs in relativistic nuclear physics with BNL and universities of the JINR Member States. Development of JINR educational portal.

Study of Interactions of Heavy Ion and Proton Beams at the LHC

Theme leader: A.S. Vodopyanov

Participating countries and international organizations:

Armenia, Austria, Azerbaijan, Bangladesh, Brazil, Bulgaria, CERN, China, Croatia, Cuba, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, India, Indonesia, Italy, Japan, Malta, Mexico, Netherlands, Norway, Pakistan, Peru, Poland, Republic of Korea, Romania, Russia, Slovakia, South Africa, Sri Lanka, Sweden, Thailand, Turkey, Ukraine, United Kingdom, USA.

Issues addressed and main goals of research:

1. Participation in the preparation of ALICE upgrade (Photon spectrometer PHOS, assembly of the setup).
2. Participation in the upgrade of ALICE Inner Tracking System (ITS).
3. Realization of experiments at the LHC, data analysis, preparation of publications.
4. Physics research program at the ALICE detector.
5. Development and upgrade of data analysis computing GRID-ALICE in Russia.
6. Participation in the maintenance and operation tasks on the ALICE detector.

Expected results in the current year:

1. Participation in the construction of the full-scale prototype of the signal registration system and in the preparation of the proposal for the upgrade of photon spectrometer PHOS.
2. Participation in the development of the ALICE ITS data control system.
3. Participation in the physics project preparation.
4. Physics simulation of heavy ions and protons interactions at LHC energies.
5. Data analysis. Preparation of publications.
6. Upgrade, testing and supporting of GRID.
7. Participation in the maintenance and operation tasks on the ALICE detector.

Development and Construction of the Prototype of a Complex for Radiotherapy and Applied Research with Heavy-Ion Beams at the Nuclotron-M/NICA

Theme leader: S.I. Tyutyunnikov

Deputy: A.A. Baldin

Participating countries and international organizations:

Armenia, Belarus, Russia, Uzbekistan.

Issues addressed and main goals of research:

Investigation of various subcritical setups and using them for energy production and radioactive waste transmutation, research of radiation hardness of materials. The quasi-infinite target (Project E&T&RM).

Participation in the design of the applied research area at the NICA complex.

Study of radiation effects in HTSC tapes to optimize their characteristics.

Expected results upon completion of the theme stages or projects:

Receiving data about the multiplicities and special distribution of energy-time neutron spectra. Research on massive targets of natural (depleted) uranium and thorium energy production capabilities and processing of radioactive waste, the study of radiation hardness of superconductors by the beams of neutrons and protons.

Expected results in the current year:

1. Installation of a big uranium target at the Phazotron in DLNP, beam adjustment on the target.
2. Investigation of neutron leakage from the surface of the massive uranium target by activation method.
3. Thermocouple device installation and calibration at the massive uranium target "BURAN".
4. Investigation of impact of high-power laser radiation on the radioactive decay of minor actinides.
5. Investigation of radiation defects in high-temperature superconductors under the irradiation with protons with energy $E = 660$ MeV.

Development of the FLNR Accelerator Complex and Experimental Setups (DRIBs-III)

Theme leaders: I.V. Kalagin
S.N. Dmitriev
S.I. Sidorchuk

Scientific leader: Yu.Ts. Oganessian

Participating countries and international organizations:

Belgium, Bulgaria, Canada, CERN, China, Czech Republic, Egypt, France, Germany, Italy, Kazakhstan, Mongolia, Poland, Republic of Korea, Russia, Serbia, Slovakia, South Africa, USA.

Issues addressed and main goals of research:

The implementation of the DRIBs-III project that includes the upgrade and development of the FLNR cyclotron complex, expansion of the experimental infrastructure of the Laboratory (construction of new physics set-ups), and the development of accelerator systems. The project aims at improving the operation stability of accelerators, increasing the intensity and improving the quality of ion beams of stable and radioactive nuclides in the energy range from 5 to 100 MeV/nucleon, while at the same time reducing power consumption. The project objective is to significantly improve the efficiency of experiments on the synthesis of superheavy elements and light nuclei at nucleon drip lines and study of their properties. Moreover, the programme of experiments with beams of radioactive nuclides is anticipated to be expanded.

Expected results in the current year:

1. Support for experiments on the synthesis of superheavy elements and study of their properties at the Superheavy Element Factory.
2. Development of a pre-separator for radiochemical studies at of SHE (GASSOL).
3. Development of a separator for multinucleon transfer reaction products (STAR).
4. Completion of the upgrade and the commissioning of the U-400M cyclotron.
5. Development of the infrastructure of the ACCULINNA-2 fragment separator (RF kicker, tritium system).
6. Implementation of the programme of physics experiments at the U-400 cyclotron.
7. Construction of the U-400R cyclotron experimental hall.
8. Preparation for the reconstruction of the U-400 cyclotron (U-400R).
9. Development of the detector system in the focal plane of the MAVR analyzer and the MULTI spectrometer comprising a 4π -neutron detector and a gamma-detector.
10. Development of methods for the diagnostics of beams of stable and radioactive nuclides.
11. Further work on constructing the GALS separation set-up based on selective laser ionization of nuclear reaction products stopped in gas.
12. Completion of assembling the cryogenic gas ion catcher and the start of adjusting the vacuum and cryogenic systems.
13. Construction of the DC-140 cyclotron.
14. Elaboration of data for designing a radiochemical laboratory of class 1.

Synthesis and Properties of Superheavy Elements, the Structure of Nuclei at the Limits of Nucleon Stability

Theme leaders: M.G. Itkis
S.I. Sidorchuk

Scientific leader: Yu.Ts. Oganessian

Participating countries and international organizations:

Belgium, Bulgaria, CERN, China, Czech Republic, Egypt, Finland, France, Germany, India, Italy, Japan, Kazakhstan, Poland, Republic of Korea, Romania, Russia, Slovakia, South Africa, Spain, Sweden, Switzerland, Ukraine, United Kingdom, USA, Vietnam.

Issues addressed and main goals of research:

Synthesis of nuclei at stability limits and the investigation of their properties. Investigation of the mechanisms of heavy-ion-induced reactions. Study of the physical and chemical properties of heavy and superheavy elements.

Expected results in the current year:

1. Experiments at the Dubna gas-filled recoil separator GFS-2 of the SHE Factory aimed at studying the production cross sections of nuclei in reactions with the ^{48}Ca , ^{50}Ti , and ^{54}Cr ions and the decay properties of synthesized nuclei.
2. Preparation for experiments on the synthesis of elements 119 and 120.
3. Experiments on the study of the radioactive decay (α -, β -decay, spontaneous fission) properties of short-lived isotopes with $Z > 100$ (No, Rf, Sg) produced in reactions with Ne, Ca, Ti, and Cr ions at the SHELS and GRAND (GFS-3) separators using the GABRIELA and SFiNX detector systems.
4. Experiments for studying the chemical properties of Cn and Fl at the Superheavy Element Factory.
5. Development of technologies for manufacturing accelerator targets from stable and radioactive isotopes, which are stable under long irradiation with high-intensity heavy-ion beams.
6. Investigation of mass-energy and angular distributions of fragments produced in multi-nucleon transfer reactions. Study of the multi-body decay of low-excited heavy and superheavy nuclei. Development of physics set-ups.
7. Study of nuclei near the boundaries of nucleon stability. Preparation for and the conduct of experiments at the ACCULINNA-2 fragment separator using radioactive beams and the cryogenic targets H_2 , D_2 , T_2 , ^3He , and ^4He .
8. Experiments at the MAVR set-up aimed at studying reactions with the emission of fast charged particles near the kinematic limit in coincidence with fission fragments. Experiments for studying the structure of neutron-rich nuclei in transfer reactions. Measurements of individual channel cross sections and total cross sections for the reactions with weakly bound nuclei.
9. Theoretical studies of the mechanisms of heavy-ion-induced reactions.
10. Maintenance and update of the web knowledge base on nuclear physics.

Non-Accelerator Neutrino Physics and Astrophysics

Theme leaders: E.A. Yakushev
A. Kovalik

Participating countries and international organizations:

Azerbaijan, Bulgaria, Czech Republic, Finland, France, Germany, Italy, Kazakhstan, Malaysia, Mongolia, Poland, Russia, Slovakia, Switzerland, United Kingdom, USA, Uzbekistan.

Issues addressed and main goals of research:

Search for the neutrinoless mode and investigation of the double-neutrino mode of the double beta decay, clarification of the neutrino nature, Majorana or Dirac, and the absolute neutrino mass scale and hierarchies. Search for the neutrino magnetic moment, coherent elastic neutrino-nucleus scattering and dark matter. Investigation of galactic and extragalactic neutrino sources, the diffusive neutrino cosmic background, and search for exotic particles (monopoles). Use of the neutrino detector for a distant investigation of processes inside of the reactor core of the Kalinin Nuclear Power Plant (KNPP). Search for sterile neutrinos. Spectroscopy of nuclei far from stability. Development of new methods for charged and neutral particle detection.

Expected results in the current year:

1. Data taking in the $2b0n$ decay measurements of ^{82}Se with the SuperNEMO spectrometer. Processing of the data collected in the GERDA experiment, set $T_{1/2}$ limits for different $2b$ -decay modes.
2. Processing of experimental data and determination of $T_{1/2}(2b2n)$ for ^{48}Ca , ^{96}Zr , ^{130}Te , ^{116}Cd , ^{82}Se . Set a refined value of $T_{1/2}(2\beta 2\nu)$ for ^{76}Ge based on the GERDA Phase II data.
3. Data taking with the HPGe-based low-background νGeN spectrometer at the Kalinin Nuclear Power Plant. Search for a signal of coherent neutrino scattering on germanium nuclei. Data taking start searching for the neutrino magnetic moment at the sensitivity level of $\sim (5-9) \cdot 10^{-12} \mu_B$ after several years of data taking.
4. Continuation of data taking in the EDELWEISS experiment with new detectors operating with an energy threshold of 0.1 keV suitable for the extra-low mass WIMP region. Analysis of previously accumulated data, determination of parameters for light dark matter for the mass region below $1 \text{ GeV}/c^2$. Start of the Ricochet phase of the experiment for precision CE ν NS studying at ILL with the detectors developed by EDELWEISS.
5. Start of data taking in the tone-scale LEGEND experiment searching for the $2b2n$ decay of ^{76}Ge . Assessment of the background level with the first batch of enriched detectors ($\sim 60 \text{ kg}$). Adding all available detectors and launching a full-scale experiment.
6. Data taking with ten clusters of the BAIKAL-GVD neutrino telescope. Search for and study of high-energy neutrinos of astrophysical nature. Construct on and commissioning of new detector clusters. Development and testing of new data acquisition and data transmission systems aiming at a lower energy threshold (Baikal project).
7. Continuation of the study of low-energy electrons from radioactive decay. Measurement of Auger spectra for ^{103}Pd and ^{125}I and low-energy conversion electrons from the decay of ^{227}Ac . Commissioning of the new vacuum evaporation setup in a radiochemical laboratory. ^{57}Co calibration measurements of the ESA-50 spectrometer. Processing of measurement results for 2022 and 2023.
8. Development and testing of new low-threshold ($\sim 200 \text{ eV}$) HPGe detectors for searching for the coherent neutrino scattering, as well as of plastic scintillator detectors for their active shielding.
9. Results of search for sterile neutrinos on the 2016-2021 data accumulated by the DANSS spectrometer. Precision estimates of the gamma and neutron background at the location of the DANSS spectrometer (room A336 under the reactor of the 4th power unit of the KNPP). R&D results of the spectrometer modernization.

10. The radiochemical laboratory of the 2nd class will be commissioned at DLNP; equipment for manufacture of radioactive sources for brachytherapy of cancer diseases will be installed; obtained sanitary and epidemiological certificates for the radiochemical laboratory will be concluded.
11. Continuation of the MONUMENT project. Analysis of data from 2021 and 2022 the experimental campaigns, namely for the measured ^{136}Ba , ^{76}Se , ^{100}Mo enriched isotopes. Preparation for measurements in 2023 (purchase of isotopically enriched elements, modernization of the muon trigger system). Data taking and analysis of accumulated data.

List of projects

Project	Leader	Priority (period of realisation)
1. SuperNEMO	O.I. Kochetov	1 (2013-2023)

Investigations of Neutron Nuclear Interactions and Properties of the Neutron

Theme leader: E.V. Lychagin

Deputies: Yu.N. Kopatch
P.V. Sedyshev

Participating countries and international organizations:

Albania, Armenia, Australia, Austria, Azerbaijan, Belarus, Botswana, Bulgaria, CERN, China, Croatia, Czech Republic, Egypt, Finland, France, Georgia, Germany, Hungary, IAEA, India, Italy, Japan, Kazakhstan, Moldova, Mongolia, North Macedonia, Poland, Republic of Korea, Romania, Russia, Serbia, Slovakia, Slovenia, South Africa, Switzerland, Thailand, Turkey, Ukraine, USA, Uzbekistan, Vietnam.

Issues addressed and main goals of research:

Experimental and theoretical investigations of symmetry breaking effects in reactions with neutrons and fundamental properties of the neutron to test the parameters of the Standard Model and search for "new physics". Investigation of the properties of excited nuclei, reactions with emission of charged particles, fission physics. Obtaining of relevant data for astrophysics, nuclear power engineering and nuclear waste transmutation problem using neutron- and gamma-induced reactions. Application of neutron physics methods in other fields of science and technology. Development and construction of detectors of neutrons and other ionizing radiation, as well as applied methods in nuclear physics with neutrons. Development of the Intense REsonance Neutron Source (IREN) and the experimental base at the IREN and IBR-2 facilities.

Expected results in the current year:

Investigations of violations of fundamental symmetries in neutron-nucleus interactions and related data

1. Measurement of energy spectra and forward-backward emission asymmetry of gamma-rays in resonances.
2. Measurement of yields of rare fission modes of ^{252}Cf .
3. Measurement of gamma-ray yields in reactions with 14 MeV neutrons.
4. Measurements of prompt fission neutrons (PFN) for ^{235}U in the resonance region.
5. Measurement of the cross section for $^{171}\text{Yb}(n,\alpha)^{168}\text{Er}$ and (n,α) reaction cross sections on gas samples (N, O, F, Ne, Ar) at E_n 3-5 MeV.
6. Measurement of the forward-backward asymmetry of the $^{14}\text{N}(n,p)^{14}\text{C}$ reaction at $E_n=100-700$ keV on EG-5 and of the $^{35}\text{Cl}(n,p)^{35}\text{S}$ reaction at $E_n=0.1-1.0$ keV on IREN.

Investigation of fundamental properties of the neutron, UCN physics:

1. Studying the possibility of creating a radiation-resistant UCN guide with both losses and fraction of non-specular reflections $\sim 10^{-3}$ per collision.
2. Simulation of the propagation of very cold neutrons (VCN) in various diamond nanopowders to optimize their parameters and increase the efficiency of VCN extraction from the source.
3. Investigation of the effect of the density of diamond nanopowders on the properties of slow neutron reflectors developed on their basis.
4. Investigation of the possibility of increasing the intensity of the UCN source based on the idea of temporary focusing using alternating magnetic fields and (or) resonant spin-flippers in a strong magnetic field.
5. Design of a neutron-moderator-device for a UCN source based on a pulsed reactor.
6. Theoretical study of neutron scattering on nuclei moving with acceleration.

Applied and methodological research

1. Creation of an experimental setup for measuring the R-effect in fission by polarized neutrons at the IBR-2 reactor.
2. Development of a method for determining the carbon concentration in soil using the tagged neutron method.
3. Investigation of optical and electronic properties of semiconductor materials using X-rays at the EG-5 accelerator.
4. Modernization of the EG-5 accelerator and its infrastructure.
5. Analysis of archaeological, biological and ecological samples by nuclear-physics methods at the IREN, REGATA2 facilities and using the laboratory equipment.
6. Completion of the modernization of the REGATA facility and its pneumatic conveying system at the IBR-2 reactor.
7. Creation of a charged particle spectrometer on the 1st channel of IREN.

Development of the IREN facility

1. Providing the neutron beam time from IREN for physics experiments.

Investigations of Functional Materials and Nanosystems Using Neutron Scattering

Theme leaders: D.P. Kozlenko
V.L. Aksenov
A.M. Balagurov

Participating countries and international organizations:

Armenia, Azerbaijan, Belarus, Bulgaria, China, Cuba, Czech Republic, Egypt, France, Germany, Hungary, India, Italy, Japan, Kazakhstan, Latvia, Mongolia, Poland, Romania, Russia, Serbia, Slovakia, South Africa, Spain, Switzerland, Tajikistan, Ukraine, United Kingdom, USA, Uzbekistan, Vietnam.

Issues addressed and main goals of research:

Investigations of structural features and dynamics of novel functional materials and nanosystems focused on determination of microscopic mechanisms of the formation of physical properties and phenomena that are important for the development of modern concepts in the areas of condensed matter physics, materials science, chemistry, geophysics, engineering sciences, biology, pharmacology, and for the development of modern technologies.

Expected results in the current year:

Realization of scientific program

1. Analysis of the structural phase transformations features in magnetostrictive alloys at variation of thermodynamic conditions, synthesis conditions, thermomechanical processing.
2. Determination of parameters of the atomic and magnetic structure of Heusler alloys $MnNi_{1-x}M_xSb$ (M – transition metal) in a wide range of thermodynamic conditions.
3. Determination of parameters of crystal, magnetic and electronic subsystems of multifunctional oxides based on cobalt, manganese, iron in the region of spin transition and antiferromagnetic-ferromagnetic-paramagnetic and metal-insulator phase transitions in a wide range of temperatures and pressures.
4. Analysis of high-pressure effects on crystal and magnetic structure of layered low-dimensional magnetic materials.
5. Study of the effect of microstructure of electrodes with varying composition on charge-discharge processes in compact electric power sources. Clarification of structural mechanisms responsible for the capacity and lifetime of batteries. Selection of optimal discharge/charge modes during cycling.
6. Analysis of processes of deposition and intercalation of electrically active ions and their derivatives from liquid and solid electrolytes at electrochemical interfaces in compact electric power sources. A comparative study of characteristics of adsorption layers (density, thickness, homogeneity) at electrochemical interfaces for electrolytes and electrodes.
7. Study of phenomena and effects induced by the interaction of ferromagnetic and superconducting order parameters in complex heterostructures with ferromagnetic and helicoidal magnetic ordering.
8. Investigation of structural stability of colloidal systems, including biomedical solutions, in bulk and at interfaces under various conditions. Determination of characteristics of adsorption layers at interfaces in case of loss of stability as a result of external influence of gradient electric and magnetic fields, as well as temperature effects. Study of the effect of aggregate formation in bulk on adsorption.
9. Investigation of the structure of a number of advanced nanosystems based on composite carbon- and silicon-containing materials, including those based on fullerenes, nanodiamonds and their bioactive derivatives. Study of complex multicomponent systems. Determination of conditions for synthesis of homogeneous systems. Investigation of effects of phase separation in advanced practical systems.
10. Determination of structural characteristics of magnetic elastomers, holding promise for technological applications.

11. Study of structure and vibrational spectra of molecular complexes: ionic-molecular inclusive materials and complexes with electric charge transfer, structural and dynamic parameters of hydrogen bonds in bioactive materials.
12. Investigation of molecular mechanisms of protein interaction, dimerization and functional characteristics of supramolecular structures and molecular complexes. Study of regularities and relationships between structural characteristics and functions of proteins, protein complexes and membrane-protein aggregates. Analysis of the effect of composition and external parameters on the phase state of membranes.
13. Determination of structural characteristics and diffusion properties of lipid nanosystems for transport of drugs and nano-drugs.
14. Analysis of geophysical processes in the lithosphere using data on textures of deep-seated and near-surface rocks. Investigation of relationships between seismic anisotropy of lithosphere rocks and textures of minerals, preferentially-oriented cracks and pores.
15. Investigation of crystallographic texture and phase composition of biological objects (mollusk shells, corals, animal bones, teeth, biomineralized structures).
16. Nondestructive testing of residual internal stresses and microstrains in real industrial products and advanced structural materials induced by various technological processes (metal and heat treatment, welding, rolling, stamping, 3D printing, etc.).
17. Investigation of relationships between microstructure and thermomechanical properties of advanced functional and structural materials (high-strength steels, aluminum and magnesium alloys, composites, cermets, etc.), analysis of mechanical behavior of structural materials under external stimuli (load, temperature).
18. Analysis of internal structure and construction of 3D models of objects of cultural and natural heritage, industrial materials and products using neutron tomography and radiography data.
19. Clarification of mechanisms of radiation damage to solids, obtaining long-life operating data on radiation damage resistance of materials.

Realization of instrument development program for the IBR-2 spectrometers

1. Development and construction of the main units for a new inverse geometry inelastic scattering spectrometer at beamline 2.
2. Development and construction of elements of basic configuration of a small-angle scattering and imaging spectrometer at beamline 10.
3. Development of neutron guide and detector system for the new DN-6 diffractometer for studies of microsamples, aimed at improving its technical parameters and expanding the available range of high pressures.
4. Improvement of technical parameters and expansion of experimental capabilities of the GRAINS multifunctional reflectometer (startup of a new neutron beam chopper, development of electrochemical and liquid cells for conducting experiments).
5. Modernization of the available IBR-2 spectrometers (HRFD, RTD, DN-12, YuMO, FSD, REFLEX, REMUR, SKAT, EPSILON) aimed at improving their technical characteristics (enhancement of luminosity, suppression of neutron background, improvement of data acquisition systems and expansion of experimental capabilities).
6. Development and construction of a prototype of a small-angle spin-echo scattering spectrometer at beamline 9.
7. Improvement of technical characteristics of the radiography and tomography spectrometer at beamline 14 (spatial resolution, radiation resistance of the detector system).
8. Upgrade of the FSS correlation spectrometer at beamline 13 and improvement of its technical parameters. Further development of the RTOF correlation method.
9. Development of neutron methods for condensed matter research, including spin-echo, neutron standing waves, neutron wave splitting, neutron magnetic resonance, radiography, tomography, and other techniques.
10. Development of neutron scattering methods for in-operando monitoring and study of electrochemical materials and interfaces. Creation of a laboratory site for the study of chemical current sources at the INP, Almaty, development of specialized electrochemical cells for neutron reflectometry.

Development of the IBR-2 Facility with a Complex of Cryogenic Neutron Moderators

Theme leaders: A.V. Vinogradov
A.V. Dolgikh

Participating countries and international organizations:

Azerbaijan, Belarus, Mongolia, Poland, Romania, Russia, Spain.

Issues addressed and main goals of research:

The main task of the theme is to increase the efficiency of the use of the IBR-2 facility for realization of the program of experimental studies, maintenance of operational reliability and safety of the reactor, development and construction of the complex of cryogenic neutron moderators.

Expected results in the current year:

1. Obtaining Rostekhnadzor license for the operation of the IBR-2 nuclear research facility.
2. Maintenance of the IBR-2 reactor operation for physics investigations.
3. Check assembling, adjustment and testing of the backup movable reflector MR-3R at the FLNP test bench. Experimental investigations on determination of dynamic characteristics and parameters of vibrations of the units and structure modules at the stage of assembly and bench testing of MR-3R.
4. Commissioning of the Linde AG cryogenic refrigerator with a cooling power of 1800 W at 10 K (KGU 1800/10) to ensure the most efficient use of the suite of IBR-2 instruments in cold neutron experiments. Optimization of the operation of the cryogenic complex.
5. Trial operation of cryogenic moderators CM-201 and CM-202.
6. Phased replacement and upgrade of the basic technological and electrical safety-related equipment of the IBR-2 nuclear research facility.
7. Development of the hardware and software structure of the information-measuring system for research and diagnostics of the IBR-2 reactor state, as well as further work on the computational and experimental substantiation of the safe and reliable operation of IBR-2 under conditions of long-term operation and intensification of degradation processes in the core.
8. Exploring the possibility of manufacturing and supplying an additional batch of fresh fuel for the IBR-2 core (in cooperation with the Mayak Production Association) to extend the service life of the reactor for physics experiments until 2040-2042.

List of projects

Project	Leader	Priority (period of realization)

Scientific and Methodological Research and Developments for Condensed Matter Investigations with IBR-2 Neutron Beams

Theme leaders: V.I. Bodnarchuk
V.I. Prikhodko

Participating countries and international organizations:

Argentine, Armenia, Belarus, Czech Republic, Germany, Hungary, Republic of Korea, Romania, Russia, Sweden, Switzerland, Ukraine, United Kingdom, Uzbekistan.

Issues addressed and main goals of research:

Regular operation, modernization and development of control systems for CM-201 and CM-202 cryogenic moderators. Development and equipping of new spectrometers, as well as modernization and reconstruction of equipment for the existing IBR-2 spectrometers in order to improve their parameters, expand experimental capabilities and ensure their faultless operation. Scientific and technical support for the development of beam-forming systems, neutron detectors, sample environment systems, cryostats and cryomagnetic systems, as well as electronics and software of data acquisition systems. Development of FLNP information and computing infrastructure.

Expected results in the current year:

1. Maintenance of regular operation of the complex of CM-201 and CM-202 cryogenic pelletized moderators for physics experiments. Automation of the vacuum system and the system for supplying helium to the pneumatic transport pipeline of the CM-202 cryogenic moderator; upgrade and development of software for control systems of the CM-202 moderator. Manufacturing of a prototype dropper for the formation of methane pellets for a complex of cryogenic moderators and carrying out of pre-commissioning works.
2. Investigation of radiation resistance of materials using the radiation research facility. Neutron activation analysis of irradiated samples using a high-purity germanium spectrometer.
3. Development of a new system for data acquisition from PSD-based multi-detector systems for the DN-12 diffractometer.
4. Introduction of new MPD32-USB 3 electronic modules into data acquisition systems at IBR-2 spectrometers.
5. Introduction of industrial digitizers in PSD-based measuring systems. Optimization of digitizer parameters to obtain the best counting and coordinate characteristics of PSD. Application of a new 32-channel digitizer for data acquisition from a prototype of the scintillation PSD developed and manufactured at the CM Department.
6. Installation and adjustment of the Astra-M scintillation detector for the FSD diffractometer.
7. Manufacturing and assembly of sectors of the BSD detector, assembly and adjustment of eight MPD32-USB 3 modules for data acquisition on the HRFD diffractometer in accordance with the project schedule.
8. Completion of the second stage of assembling the detector system for the REMUR spectrometer.
9. Manufacturing, installation and commissioning of a beam monitor on the YuMO spectrometer.
10. Development of technology for creating thermal neutron detectors based on the B₄C converter, manufacturing and testing of detector prototypes.
11. Commissioning of a horizontal-vertical cryostat with a superconducting magnet on the DN-12 diffractometer in cooperation with the specialists from the NICM Department.
12. Research and development of devices based on closed-cycle cryocoolers for obtaining temperatures in the range of 4.2-0.5 K by liquefying ³He and pumping out its saturated vapor.
13. Application of VITESS, McStas and other software packages for simulating neutron scattering in samples and in individual components of spectrometers. Complex calculations and optimization of spectrometers.

14. Development of a system to control the frequency and rotation phase of mechanical neutron beam choppers based on programmable logic controllers (PLC). Modernization of PLC devices at the request of users, development of technical specifications for the application of PLC for automation of spectrometer components (positioning devices, control systems of special sample environment equipment, etc.).
15. Development and manufacturing of units for neutron beam choppers with two drums for REMUR and GRAINS reflectometers.
16. Development of a mechanical neutron beam filter with time focusing.
17. Development of specialized sample cells for the GRAINS reflectometer (cell with humidity control, liquid-solid flow cell).
18. Maintenance and development of the Sonix+ software package at the request of users, as well as on the basis of the latest versions of the software packages and systems used. Upgrade of Sonix+ on the DN-6, DN-12, RTD spectrometers. Development of modules (within the framework of Sonix+) for controlling MPD32 controllers and CAEN N673 digitizer, as well as software for new detectors on HRFD and FSD diffractometers.
19. Software support for further automation of control systems for the complex of cryogenic pelletized moderators CM-201 and CM-202.
20. Modernization of the FLNP central data repository for experimental data. Development of Wi-Fi network in buildings 42 (first and second floors), 42a and 44.

List of projects

Project	Leader	Priority (period of realisation)
1. Construction of a wide-aperture backscattering detector (BSD) for the HRFD diffractometer	V.M. Milkov	(2021-2023)

List of Activities

Activity or Experiment Laboratory or other Division of JINR	Leaders Main researchers	Status
1. Maintenance of regular operation and development of the complex of CM-201 and CM-202 cryogenic pelletized moderators. Further automation of moderators' control systems	M.V. Bulavin	Realization
2. Investigation of radiation resistance of materials, electronics and detectors for large-scale physics facilities: ATLAS, CMS, NICA, ITER, ESS, etc.; applied research	M.V. Bulavin	Realization
FLNP	A.V. Altynov, M.O. Belova, A.V. Galushko, A.S. Kirilov, K.A. Mukhin, T.B. Petukhova, 10 engineers	
3. Development of VITESS software package and simulation of individual components of spectrometers. Investigation of neutron background conditions at IBR-2 spectrometers, development of recommendations to reduce the background level	V.I. Bodnarchuk	Realization
FLNP	V.V. Sadilov	

<p>4. Development of the horizontal/vertical cryostat with a superconducting magnet. Development and modernization of cryostats at IBR-2 spectrometers. Modernization of the cryogenic test bench for working with liquid helium</p>	<p>A.N. Chernikov S.E. Kichanov</p>	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;">Realization</div>
<p>FLNP</p>	<p>A.P. Buzdavin, 1 engineer, 1 laboratory assistant</p>	
<p>5. Completion of development and construction of the BSD detector. Putting the detector into operation at the HRFD diffractometer. Commissioning of the upgraded ASTRA-M detector at FSD</p>	<p>V.M. Milkov A.A. Bogdzel A.S. Kirilov</p>	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;">Realization</div>
<p>FLNP</p>	<p>G.D. Bokuchava, V.A. Drozdov, V.V. Shvetsov, V.G. Simkin, 3 engineers, 4 laboratory assistants</p>	
<p>6. Development and investigation of prototypes of PSD systems based on counters with a resistive anode wire up to 1 m long and large-area (~1 m²) scintillation position-sensitive detectors. Development of a 2D PSD with a central opening for a direct beam for the REMUR spectrometer. Investigation of boron-based neutron converters. Development and equipping of IBR-2 spectrometers with beam monitors</p>	<p>A.V. Churakov V.M. Milkov A.A. Bogdzel</p>	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;">Realization</div>
<p>FLNP</p>	<p>V.A. Drozdov, A.K. Kurilkin, V.M. Milkov, S.M. Murashkevich, V.V. Zhuravlev, 3 engineers</p>	
<p>7. Modernization of detector and data acquisition electronics for IBR-2 spectrometers</p>	<p>A.A. Bogdzel A.S. Kirilov</p>	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;">Realization</div>
<p>FLNP</p>	<p>V.A. Drozdov, E.I. Litvinenko, V.M. Milkov, S.M. Murashkevich, V.V. Zhuravlev, 2 engineers</p>	
<p>8. Introduction of programmable logic controllers in control systems for actuators, sample environment equipment and spectrometers' choppers. Installation of additional equipment at IBR-2 spectrometers at the request of instrument responsables</p>	<p>V.I. Bodnarchuk I.V. Gapon</p>	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;">Realization</div>
<p>FLNP</p>	<p>A.V. Altynov, A.S. Kirilov, T.B. Petukhova, N.D. Zernin, V.V. Zhuravlev, 2 engineers</p>	
<p>9. Maintenance and development of the Sonix+ software package and installation of its new versions at IBR-2 spectrometers. Development of FLNP central servers and network infrastructure in accordance with the development strategy of the JINR computer network. Modernization of Laboratory's mail system and Wi-Fi network</p>	<p>A.S. Kirilov V.I. Prikhodko</p>	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;">Realization</div>
<p>FLNP</p>	<p>A.S. Kirilov, G.A. Sukhomlinov, 4 engineers</p>	
<p>MLIT</p>	<p>A.G. Dolbilov, 1 engineer</p>

Modern Trends and Developments in Raman Microspectroscopy and Photoluminescence for Condensed Matter Studies

Theme leaders: G.M. Arzumanyan
N. Kučerka

Participating countries and international organizations:

Armenia, Belarus, India, Kazakhstan, Poland, Romania, Russia, Serbia, Slovakia, Uzbekistan.

Issues addressed and main goals of research:

Fundamental and applied research in the field of spontaneous and nonlinear Raman microspectroscopy aimed at highly sensitive biosensing. Study of mechanisms and nature of surface-enhanced Raman scattering (SERS) taking into account the anomalous ratio of line intensities in the anti-Stokes and Stokes spectral regions. Applied research is aimed at using Raman spectroscopy and fluorescence microscopy in biomedical research, in particular, in the search for spectral markers of NETosis, as well as some features of lipid-protein interactions.

Expected results in the current year:

- Investigation of a possible anomaly in the ratio of aSt/St peaks in SERS spectra depending on the pump power.
- Elucidation of conformational changes in the Raman spectrum of proteins in the presence of membrane mimetics.
- Light-induced NETosis upon excitation of neutrophil cells by radiation in the visible region of the spectrum: identification of mechanisms and signaling pathways.
- Application of fluorescence microscopy to identify programmed death of neutrophil cells under the influence of various activators, including UV- and visible radiation.

List of projects

Project	Leaders	Priority (period of realisation)
1. BIOPHOTONICS	G.M. Arzumanyan N. Kučerka Deputy: K.Z. Mamatkulov	1 (2021-2023)

List of Activities

Activity or Experiment	Leaders	Status
Laboratory or other Division of JINR	Main researchers	
1. Study of the features of Stokes and anti-Stokes components of SERS spectra from analyte molecules in order to understand the processes of enhancement in SERS spectroscopy FLNP	G.M. Arzumanyan	Data taking Realization
	Ye. Arynbeq, K.Z. Mamatkulov, I.A. Morkovnikov, 2 engineers	
2. Determination of the range of pump intensities for recording reproducible aSt/St spectra FLNP	G.M. Arzumanyan K.Z. Mamatkulov	Data taking Realization
	Ye. Arynbeq, A.A. Shutikov, 1 engineer	

3. Stabilization of membrane proteins and studies of their structure using liposomes/ lipodiscs by Raman spectroscopy, electron microscopy and SANS FLNP	G.M. Arzumanyan N. Kučerka	Realization
	A. Damir, K.Z. Mamatkulov, A.A. Shutikov, D.S. Zakritnaya	
4. Testing the technique for obtaining Raman spectra of liposomes / lipodiscs with membrane proteins and "empty" liposomes / lipodiscs FLNP	K.Z. Mamatkulov N. Kučerka	Realization
	Ye. Arynbeq, A. Damir, A.A. Shutikov, D.S. Zakrinaya, 1 engineer	
5. Study of the influence of lipid environment on the structure of membrane protein FLNP	G.M. Arzumanyan N. Kučerka	Data taking Realization
	Ye. Arynbeq, K.Z. Mamatkulov, 1 engineer, 2 laboratory assistants	
6. Search for spectral / Raman markers of NETosis FLNP	G.M. Arzumanyan K.Z. Mamatkulov	Data taking Realization
	Ye Arynbeq, E.M. Demina, I.M. Pugachevskaya, A.A. Shutikov, D.S. Zakritnaya, 1 engineer	
7. Study of mechanisms of sterile activation of NETosis under UV- and visible radiation FLNP	G.M. Arzumanyan K.Z. Mamatkulov	Data taking Realization
	Ye. Arynbeq, E.M. Demina, D.S. Kravtsunova, A.A. Shtikov, D.S. Zakritnaya	
8. Mastering the technique of ultra-low frequency Raman spectroscopy ~ 10 cm⁻¹ FLNP	G.M. Arzumanyan K.Z. Mamatkulov	Realization
	Ye. Arynbeq, A.A. Shutikov, 2 engineers

Development of the Conceptual Design of a New Advanced Neutron Source – fast pulse NEPTUN reactor at JINR

Theme leaders: V.N. Shvetsov
M.V. Bulavin

Participating Countries and International organizations:

Argentina, Belarus, Czech Republic, France, Germany, Hungary, Romania, Russia, South Africa, Sweden, Uzbekistan.

Issues addressed and main goals of research:

Development of the conceptual design of a new advanced neutron source at JINR.

Expected results upon completion of the theme:

1. The scientific program and the concept of the suite of instruments for conducting research in condensed matter physics, nuclear physics and applied research at the new NEPTUN pulsed reactor.
2. A working version of the dynamic bending model and evaluation of the effect of the pellet structure of fuel elements (compared to the rod structure) on the reactivity of dynamic bending at the beginning of the fuel lifetime and verification of calculations at RFNC-VNIITF. Technical specification for conducting experiments to check the shape of the bending of a fuel element prototype under rapid heating in the neutron flux of pulsed reactors.
3. Obtaining a permit for the use of nuclear materials that are exclusively in federal ownership (NM EFO). Production of the first batch of neptunium oxide for the refinement of the fuel manufacturing technology for experimental fuel rods and conducting pre-reactor studies of fuel compositions.
4. Evaluation of temperature shape change of the vessel, safety casing and reactivity modulator of the NEPTUN reactor. A list of experimental tests of chosen technical solutions to justify the design of the reactor. Working design documentation for a full-scale test stand of the reactivity modulator. Start of the manufacturing of the test stand of the reactivity modulator in accordance with the developed working design documentation. Technical specifications for the development of preliminary design and infrastructure projects.
5. Selection of optimal materials for use as a cryogenic moderator at the new NEPTUN reactor. Development of working design documentation for a full-scale test stand of a mesitylene-based cryogenic moderator with a system for fast loading and unloading of working material.

Expected results in the current year:

1. Approval of the technical specification, the program of pre-reactor studies of the properties of fuel compositions for fuel elements of the NEPTUN reactor and the conclusion of an agreement for R&D between JINR and JSC VNIINM for 2022-2023.
2. Assessment of the degree of applicability of the harmonic oscillator model, refinement of parameters corresponding to thermal processes in the real NEPTUN reactor. Calculations of dynamics for the case of a small gap in the supports. Preparation of initial data for verification of calculations in RFNC-VNIITF (SC Rosatom).
3. Preliminary scientific program and the concept of a suite of scientific instruments for conducting research in condensed matter physics, nuclear physics and applied research at the new NEPTUN pulsed reactor (IBR-3).
4. Approval of the technical specification and the conclusion of an agreement for R&D to optimize the reactivity modulator of the NEPTUN reactor between JINR and NIKIET. Beginning of elaboration of a list of experimental tests of the chosen technical solutions. Development of working design documentation for the test stand of the reactivity modulator.

5. Analysis of the efficiency of using hydrogen-containing materials (methane, triphenylmethane, liquid hydrogen, deuterium, etc.) as a cryogenic moderator at the new NEPTUN reactor (IBR-3) and their comparison with mesitylene. Development of working design documentation for a chamber-simulator of a cryogenic mesitylene-based moderator with a system for fast loading and unloading of working material.

List of Activities

Activity or experiment	Leaders
Laboratory or other Division of JINR	Main researchers
1. Development and elaboration of the scientific program and the concept of the suite of instruments for conducting research in condensed matter physics, nuclear physics and applied research	V.N. Shvetsov M.V. Bulavin N. Kučerka V.I. Bodnarchuk

Development of the SOLCRYS Structural Research Laboratory at the SOLARIS National Synchrotron Radiation Centre

Theme leader: N. Kučerka

Participating Countries and International organizations:

Belarus, Poland, Russia, Slovakia, Ukraine.

Issues addressed and main goals of research:

The development of a new laboratory for structural research of new materials (catalysts, polymers, etc.), nanomaterials (nanoparticles, nanocomposites, etc.), materials under extreme conditions (superconductors, perovskites, etc.) and biomaterials (proteins, DNA, etc.) utilizing synchrotron X-rays.

Expected results in the current year:

1. The finalization of construction works on the extension of current experimental hall for placing there the end stations of experimental beamlines, as well as the sample preparation laboratory.
2. The design of experimental beamlines, purchase and installation of the research infrastructure.
3. The development of user program for engaging potential users during the infrastructure design and their full access to the SOLCRYS laboratory.

List of Activities

Activity or experiment	Leaders
Laboratory or other Division of JINR	Main researchers
1. Elaboration and development of technical infrastructure within a scope necessary to install and properly operate the research equipment of the SOLCRYS laboratory	N. Kučerka
2. Design, purchase and installation of a superconducting wiggler as a radiation source in the X-ray range with an upper photon energy at least 20 keV	N. Kučerka
3. Design, purchase and installation of research lines of synchrotron radiation	A.I. Kuklin E.V. Lukin
4. Design, purchase and installation of measuring stations for diffraction studies and studies of scattering at small angles	A.I. Kuklin E.V. Lukin

Radiation Physics, Radiochemistry, and Nanotechnology Investigations Using Beams of Accelerated Heavy Ions

Theme leaders: S.N. Dmitriev
P.Yu. Apel

Participating countries and international organizations:

Armenia, Belarus, Bulgaria, China, Czech Republic, Vietnam, Germany, Hungary, Kazakhstan, Moldova, Mongolia, Poland, Romania, Russia, Serbia, Slovak Republic, South Africa, USA.

Issues addressed and main goals of research:

Transition to a new level of research and development in the fields of radiation solid-state physics, applied radiochemistry, and materials science, with possible nanotechnology applications. The main emphasis will be on the modification of materials at the nanometer scale and on the study of the effects produced by heavy ions in matter with the aim of revealing the fundamental mechanisms and developing nanotechnology applications of ion beams. Upgrade of the FLNR facilities for the production of medical isotopes and the development of materials modification methods.

Expected results in the current year:

1. Determination of the radiation resistance of $MgAl_2O_4$ to swift heavy-ion irradiation using optical spectroscopy.
2. Modelling of swift heavy-ion tracks in subsurface layers and interfaces of nanostructured dielectric and composite materials.
3. Production of self-organized silver and gold nanostructures on the surface of polyester and polyimide track membranes as platforms for analytical devices.
4. Development of track membranes functionalized by silver nanoparticles and aptamers for concentrating and detecting viruses in the environment. Construction of sensors based on track membranes using a Raman-active label for detecting viral contamination.
5. Development of track membranes based on immobilized proteins suppressing the damage of nucleic acid for the study of free DNA in the environment and for the use in non-destructive methods of material analysis.
6. Development and study of track membranes coated with amphipathic fusion inhibitors and other virucidal compounds against RNA containing enveloped viruses.
7. Analysis of the effect of the chemical composition and the architecture of the track membrane porous structure on cell growth. Development of bioreactors using track membranes for cell growth with a view to fabricating personalized tissue prostheses.
8. Production of hybrid nanomaterials using ion track etching technologies, vacuum deposition, electrospinning of polymer nanofibers, and directed chemical modification for novel separation processes and energy conservation.
9. Optimization of the parameters for the formation of nanoscale coatings based on polyolefins, fluoropolymers, and organosilicon compounds formed on the surfaces of polyethylene terephthalate track membranes from an active gas phase.
10. Assessment of the distribution of trace elements and radionuclides in the ecosystems of the Gobi region of Mongolia.
11. Acquisition of nuclear data required for producing nuclear medicine radioisotopes using MT-25 microtron.

Research on the Biological Effects of Heavy Charged Particles of Different Energies

Theme leaders: E.A. Krasavin
A.N. Bugay

Participating countries and international organizations:

Armenia, Belarus, Bulgaria, Czech Republic, Cuba, Germany, Italy, Mongolia, Poland, Romania, Russia, Serbia, Slovakia, Uzbekistan, Vietnam.

Issues addressed and main goals of research:

Theoretical and experimental research on the biological effects of heavy charged particles of different energies at JINR's basic facilities.

Research and development will include:

1. Research on the mechanisms of the development of DNA molecular damage and its repair in cultures of human and mammalian normal and tumor cells and in histological sections of normal and tumor tissues of animals exposed to radiations of different LET.
2. Research on the induction and molecular nature of gene and structural mutations and genetic stability mechanisms in higher and lower eukaryote cells after exposure to ionizing radiations of different quality.
3. Research on the formation of complex chromosomal aberrations in human and mammalian normal and tumor cells after exposure to radiations of different LET.
4. Research on behavioral reaction disorders and pathomorphological changes in central nervous system (CNS) structures of irradiated laboratory animals.
5. Research on neurodegenerative changes in different CNS structures after exposure to ionizing radiations of different quality.
6. Research on the molecular and cellular mechanisms of the action of cytosine arabinoside (Ara-C) in normal and tumor cells in combination with different modifiers of reparative DNA synthesis after proton beam and photon exposure.
7. Mathematical modeling of acute and long-term biological effects at different levels of biological organization (from the molecular to tissue one) after exposure to radiations of different quality.
8. Improvement of methods of physical and dosimetric monitoring of charged particle beams of different energies for radiobiological experiments. Calculation of shieldings for new nuclear physics facilities. Participation in designing and testing nuclear planetary science instruments.

Expected results in the current year:

1. To continue the analysis of clustered DNA double-strand break (DSB) formation and repair in human skin fibroblast nuclei and radioresistant U87 glioblastoma tumor cells after accelerated heavy charged particle exposure.
2. To continue the analysis of the formation and structure of complex clustered DNA damage by immunocytochemical staining of the repair proteins γ H2AX, 53BP1, OGG1, and XRCC1 in human fibroblast nuclei after accelerated heavy ion exposure.
3. To continue comparative analysis of the proportion of different DNA DSB repair pathways in human fibroblasts by immunocytochemical staining of the repair proteins RAD51 (HR) and DNA PKcs (NHEJ) after exposure to radiations of different quality.
4. To continue experiments to study the expression of the genes encoding the repair proteins (RAD51, DNAPKcs, NBS1, MRE11, etc.) in human skin fibroblasts after accelerated heavy charged particle exposure.
5. To continue studying apoptosis induction in human skin fibroblasts and mammalian CNS neurons after accelerated heavy charged particle exposure.

6. To continue studying clustered DNA DSB formation and repair in mammalian CNS cells after photon and accelerated heavy ion exposure.
7. To continue research on the induction of structural rearrangements in yeast cells by radiations of different LET.
8. To continue research on the influence of mitochondrial DNA damage on yeast cell radiosensitivity and mutagenesis.
9. To continue the analysis of chromosomal damage in radiation-induced mutants at different times after irradiation of a mammalian cell culture.
10. To perform metaphase and mFISH analysis of chromosomal aberrations in peripheral blood lymphocytes of *Macaca mulatta* monkeys induced by ionizing radiations with different physical characteristics.
11. To continue mFISH analysis of complex aberrations in human normal and tumor cells induced by ionizing radiations with different physical characteristics.
12. To study the radiation-induced secretion of the inflammatory cytokines TNF alpha, IL-1, IL-6, and MCP-1 in mouse brain homogenates in the long term after mouse head irradiation with accelerated protons.
13. To evaluate the level of the myelin basic protein (MBP) in mouse brain homogenates in the long term after mouse head irradiation with accelerated protons.
14. To continue studying the formation and elimination of γ H2AX/53BP1 foci in cultures of U87 glioblastoma and B16 melanoma cells after exposure to Bragg peak protons and photons in the presence of Ara-C in combination with different modifiers of reparative DNA synthesis.
15. To continue studying DNA DSB formation in different parts of rodent CNS after in vivo irradiation with protons and photons in the presence of Ara-C in combination with different modifiers of reparative DNA synthesis.
16. To analyze and evaluate morphological changes and apoptosis (by TUNEL staining) in the liver, brain, and kidneys of mature rats after the combined use of AraC and proton radiation.
17. To analyze the neuroprotective effect of Cerebrolysin after proton irradiation of small laboratory animals.
18. To continue the study of behavioral, morphological, and functional disorders in rodents at different times after exposure to photon and proton beams.
19. To apply computer vision algorithms to biological data processing, in histology, and in behavioral experiments.
20. To continue mathematical modeling of DNA damage formation and repair kinetics after irradiation of normal and tumor cells with heavy charged particles of different energies.
21. To continue mathematical modeling of the dynamics of a tumor cell population after ionizing radiation exposure in the presence of DNA synthesis inhibitors.
22. To continue molecular dynamics modeling of structure and function impairments in synaptic receptor proteins.
23. To continue mathematical modeling of radiation-induced neurogenesis and gliogenesis impairments and neuroinflammatory processes in CNS structures.
24. To perform mathematical modeling of chromosomal aberration induction in mammalian and human cells by ionizing radiations with different characteristics.
25. In cooperation with the RAS Institute of Space Research, to continue testing the tagged proton method at the DLNP Phasotron.
26. To ensure the conduction of radiobiological experiments at JINR's accelerators.
27. To participate in the design and fabrication of the SIMBO station at ARIADNA applied beams of the NICA complex.
28. To develop a project of a space radiation simulator for Nuclotron's applied beams.
29. To measure the radiation environment (neutron fields) around the NICA booster during commissioning.

Research on Cosmic Matter on Earth and in Nearby Space; Research on the Biological and Geochemical Specifics of the Early Earth

Theme leaders: E.A. Krasavin
A.Yu. Rozanov
V.N. Shvetsov

Participating countries and international organizations:

Italy, Russia, USA.

Issues addressed and main goals of research:

1. Study of microfossils and organic compounds in meteorites and ancient terrestrial rocks.
2. Research on the synthesis of complex prebiotic compounds from formamide under the action of radiation in the presence of meteorites and terrestrial rocks as catalysts.

Expected results upon completion of the theme stages or projects:

1. To expand ideas about the diversity of fossils in meteorites.
2. To carry out the synthesis of prebiotic compounds from formamide using terrestrial rocks as catalysts and compare the results with those obtained earlier, where meteorites were used.

Expected results in the current year:

1. To continue the search for and study of microfossils in meteorites and terrestrial rocks using electron microscopy.
2. To continue research on the synthesis of complex prebiotic compounds from formamide under the action of accelerated ions using meteorites and minerals of terrestrial origin as catalysts.
3. To continue collection and processing of data on microfossils in meteorites (electronic microscopy and energy-dispersive X-ray spectroscopy images).

Biomedical and Radiation-Genetic Studies Using Different Types of Ionizing Radiation

Theme leaders: G.V. Mitsyn
S.L. Yakovenko

Deputy: S.V. Shvidky

Participating countries and international organizations:

Belgium, China, Czech Republic, Moldova, Poland, Romania, Russia, South Africa.

Issues addressed and main goals of research:

Biomedical and clinical research of proton radiotherapy for cancer treatment. Formation of the experimental data base in the field of radiation mutagenesis in animal germ cells.

Expected results in the current year:

1. Evaluation of effectiveness of conducted radiation treatment of different neoplasms.
2. Increase of functional capability of the developed 3D treatment planning software.
3. Design and construction of prototype equipment for dynamic conformal irradiation of deep-seated tumours with the proton beam.
4. Development and improvement of detectors and tools for clinical dosimetry of medical hadron beams.
5. Continuation of research to determine forms of fibroblast cell death depending on the dose of ionizing radiation.
6. Study of mechanisms of functional and neurochemical disorders in the central nervous system during exposure to radiation with different linear energy transfer.
7. Mastering of new methods for evaluation of effectiveness of cytotoxic activity of nanoparticles on tumour cells.
8. Studies of difference in radiobiological reactions for normal and cancer cells irradiated by flash technique.
9. Continuation of the molecular analysis of gamma- and neutron-induced intragenic structural changes in germline cells.
10. Continuation of the sequence analysis of inherited DAN changes at the genome level of the offspring.
11. Continuation of the work on the analysis of the transcriptome in somatic cells differing in radiosensitivity.
12. Determination of the secondary structure of the Dsup protein using SAXS, DLS, and circular dichroism methods.
13. Transcriptome analysis of *D.melanogaster* strains and human cell line HEK293 expressing Dsup protein.
14. Assessment of metabolic activity (MTT-test) and apoptosis induction (according to caspase-3/7 activity) in human HEK293 culture cells expressing Dsup, determination of the level of reactive oxygen species in cells.
15. Development of a project of a specialized isochronous cyclotron for proton therapy.
16. Measurements of the magnetic field of the MC1 bending magnet for the transport line of the AIC-144, Krakow, Poland.

List of projects

Project	Leader	Priority (period of realisation)
1. Further development of methods, technologies, schedule modes and provision of radiotherapy	G.V. Mitsyn	1 (2017-2023)
2. RADIOGENE: Molecular genetics of radiation-induced changes at the gene, genome and transcriptome level in <i>Drosophila melanogaster</i>	K.P. Afanasyeva Deputy: A.E. Rusakovich	1 (2017-2023)
3. Study of the radioprotective properties of the Damage suppressor (Dsup) protein on a model organism <i>D.melanogaster</i> and the human cell culture HEK293	E.V. Kravchenko	1 (2021-2023)

List of Activities

Activity or Experiment Laboratory or other Division of JINR	Leaders Main researchers	Status

Development of Scientific DLNP Infrastructure for Research Using Semiconductor Detectors, Laser Metrology, Electrons, Positrons and Cryogenic Technology

Theme leaders: V.V. Glagolev
G.A. Shelkov

Deputy: V.A. Rozhkov

Participating countries and international organizations:

Armenia, Belarus, Canada, CERN, Croatia, Cuba, Czech Republic, Egypt, Germany, Israel, Italy, Japan, Poland, Romania, Russia, South Africa, Switzerland, Ukraine, United Kingdom, USA, Uzbekistan, Vietnam.

Issues addressed and main goals of research:

Conducting scientific and methodological studies of high-resolution hybrid matrix detectors for high-energy physics and the atomic nucleus.

Development of scientific cooperation with research institutes to study the possibility of using the developed detectors in other fields of science and technology (primarily in the field of healthcare and mining).

Development of infrastructure for studies of properties of semiconductor detectors, including particle beam tests for use by JINR groups and institutes of the Member States.

Creating a network of Compact Precision Laser Inclometers (CPLI); creating a prototype of an amplitude interferometric length meter for a length of 16 m; creating a prototype of a laser reference line for a length of 128 v; creating a prototype of a seismic-stabilized research platform based on the CPLI.

Study of resolution of the CPLI when determining kinematic and dynamic parameters of wave processes in the seismological observation system of the Center for Geophysical Monitoring of the National Academy of Sciences of Belarus.

Study of formation of defects in materials as a result of various physical influences.

Extension of the existing experimental base of PAS.

Creation of facilities and experiments on accelerators to obtain new information to verify theoretical ideas in processes of strong, weak, and electromagnetic interactions of elementary particles and light nuclei at intermediate energies.

Creating a setup for carrying out measurements with test electron beams.

Expected results in the current year:

1. Development of a prototype and software for the "head" tomograph.
2. Development of prototype detectors, electronics based on FPGA and software for Timepix4.
3. Development and creation of an absolute length meter with micron resolution for a length of 1-10 m. Determining the sensitivity of the meter on a length of 0.1 m. R&D of a 128-meter laser reference line with the ability to measure the spatial position of the Measured Point on a controlled object (nondestructive testing). Measurement of microseismic activity at the MPD and assessment of the effect of microseisms on the luminosity of the NICA collider.
4. Installation of CPLI in stationary conditions of a geophysical observatory, preparation and testing of an instrumentation complex to carry out complex observation of seismic event detection and to determine angular oscillations of the Earth surface; connection of the CPLI hardware complex to the automated workplace of shift operator; organizing collection and storage of CPLI data in a geophysical monitoring service.
5. Completion of the ordering system of the monochromatic positron beam and commissioning of the PALS spectrometer with a monochromatic positron beam.
6. Testing the method of ion etching on the created etching system and applying it to study thin-film multilayer materials.
7. Conducting experiments with Active Target (GDH).
8. Commissioning of the LINAC-200.

List of projects

Project	Leader	Priority (period of realisation)
1. Novel semiconductor detectors for fundamental and applied research	G.A. Shelkov V.A. Rozhkov	1 (2015-2023)

Information and Computing Infrastructure of JINR

Theme leader: V.V. Korenkov

Deputy: T.A. Strizh

Participating Countries and International organizations:

Armenia, Azerbaijan, Belarus, Bulgaria, CERN, China, Czech Republic, Egypt, France, Georgia, Germany, Italy, Kazakhstan, Moldova, Mongolia, Poland, Romania, Russia, Serbia, Slovakia, South Africa, Sweden, Taiwan, Ukraine, USA.

Issues addressed and main goals of research:

The purpose of the theme is to develop the network, information and computing infrastructure of JINR for the research and production activities of the Institute and its Member States on the basis of state-of-the-art information technologies in accordance with the Seven-Year Plan for the development of JINR. A particular direction within the theme is the development of the JINR MLIT Multifunctional Information and Computing Complex (MICC) presented as a Project.

Expected results in the current year:

1. Provision of the stable, safe and integral functioning of the JINR information and telecommunication network (backbone network (2x100 Gbps); transport network of the NICA megaproject (8x100 Gbps); MLIT mesh network (100 Gbps); backbone external telecommunication channels (3x100 Gbps); Wi-Fi network at the Institute's sites.

Provision of the full-scale and optimal operation of the guaranteed power supply and climate control systems of the MICC computing infrastructure. Commissioning of a new fire safety system of the MICC infrastructure.

Expansion of the performance and storage system of the MICC basic components, i.e., Tier1 center at JINR, Tier2/CICC, EOS system. Support and maintenance of user work with the EOS system. Development of the system of access to the home directories of JINR users (AFS), of the unified storage and access system for the MICC common software (CVMFS), transition to a new software system for working with tape robots (CTA). Creation and update of a polygon for debugging and testing new software for the uppermost components of the MICC.

Extension of the computing capacities of the cloud service for scientific and engineering computing due to integration with some cloud infrastructures of institutes of the Russian Federation collaborating with JINR and of other JINR Member States. Expansion of the number of users and participants of the DICE on the basis of the cloud resources of the JINR Member States' organizations. Enlargement of the resources of the MICC cloud, including at the expense of the resources acquired by the Baikal-GVD, JUNO, NOvA/DUNE experiments, and their maintenance.

Development of low-level software for automating the process of data transfer both between the layers of the hierarchical data processing and storage system of the "Govorun" supercomputer and between computing sites included in the distributed environment to model and reconstruct events for the NICA experiments.

Support and maintenance of the operation of the WLCG virtual organizations, the NICA, COMPASS, NOvA, ILC and other experiments, local user groups on the MICC Tier1 and Tier2 resources.

Putting into trial operation and development of SPD experiment systems for: management of processing physical events mass simulation data; data management implementing the model and policy of working with them; data processing infrastructure monitoring. Connection to the load management system of the computing resources of the SPD collaboration: PNPI, St. Petersburg State University, Samara University, SPD Online Filter (prototype).

Expansion of the DIRAC-based distributed information and computing platform. Integration of new computing and storage resources.

Development and support of the current MICC monitoring and accounting system, inclusion of monitoring the parameters of new computing and engineering elements in the list of monitored services and hardware.

Creation of a prototype of an integrated system for monitoring and managing the MICC services and hardware on the basis of new technological approaches, including Big Data analytics. Deployment of the prototype of a Big Data user infrastructure to solve JINR's urgent tasks.

2. Development and maintenance of the systems EDS "Dubna", APT EVM for NICA, ADB2, ISS, HR LHEP, CERNDDB, EDS "Advance reports", JINRex at the request of end users. Development and commissioning of a new version of the PIN system. Maintenance of the JINR Information System for Scientific Certification (ISSC) and "Document Base". Transition of the functionality of the "Document Base" system into the EDS "Dubna". Trial operation of the localized server of scientific publications based on the Invenio-JOIN2 software program, provision of interaction with the PIN IS at the level of bibliographic metadata.

Transition of the "Dubna" program library to double precision and inclusion of the programs in the JINRLIB mathematical program library.

Modernization of the information and software support of central information servers, portals and databases to ensure the MLIT and JINR activities: maintenance and update of the MLIT portals, of the website of the JINR PEPAN and "PEPAN Letters" journals on top of the Open Journal Systems (OJS) software for managing the editorial process, of the websites "JINR Dissertation Councils", INDICO, "JINR Photo Archive", "Special Assessment of Working Conditions (SAWC)-Expert", etc. Creation and support of websites, including in hosting mode, at the request of the Institute's structural subdivisions.

Commissioning and further development of user services of the web-based information and analytical system for managing network and other types of software licenses at MLIT.

Implementation of the hierarchical data processing and storage system in the information and computing system for radiobiological research to accelerate experimental data processing, development of web services to ensure convenient user work with the results of data analysis.

Trial operation of the "Personal Account" system of the account management service.

Development of the concept and creation of the technological basis for the "JINR Digital Ecosystem" platform. Integration of several services of the corporate information system that are functioning at JINR into the platform.

3. Holding of special courses related to data processing and analysis for megascience experiments, including the NICA project. Organization of tutorials on solving applied tasks on the basis of machine and deep learning methods, including in the JINR Member States in accordance with international cooperation programs.

Development of a polygon for intelligent cognitive robots and holding of laboratory workshops on robotics.

Methods, Algorithms and Software for Modeling Physical Systems, Mathematical Processing and Analysis of Experimental Data

Theme leaders: Gh. Adam
P.V. Zrelou

Deputies: J. Busa
O. Chuluunbaatar

Participating Countries and International organizations:

Armenia, Belarus, Bulgaria, CERN, China, Egypt, France, Georgia, Germany, Israel, Italy, Kazakhstan, Mexico, Moldova, Mongolia, Poland, Romania, Russia, Serbia, Slovakia, South Africa, Tajikistan, United Kingdom, USA, Vietnam.

Issues addressed and main goals of research:

Carrying out paramount advanced research in computational mathematics and physics, directed to the creation of new mathematical methods, algorithms, and software for the numerical or symbolic-numerical solution of topics arising in experimental and theoretical physics studies. This subject area includes a wide spectrum of investigations approved for completion in JINR within the seven-year period 2017–2023 in high energy physics, nuclear physics, physics of condensed matter and of nanostructures, biophysics, information technologies, the solution of which is inseparable from the use of computing. Such subject matters of the outmost importance in JINR are the NICA project, the neutrino program, the superheavy and exotic nuclei physics, the neutron-based investigations. The needed numerical or symbolic-numerical computing will be done on the Multifunctional Information and Computing Complex (MICC), primarily the HybriLIT heterogeneous computing platform which involves the training and test cluster HybriLIT and the "Govorun" supercomputer and the emerging Big Data distributed infrastructure. The research teams include both experienced scientists with outstanding scientific achievements and enthusiastic young scientists and engineers. The requested financing will cover salaries, participations in scientific conferences, scientific visits and the acquisition of a minimal number of personal computers and licenses, within the approved resources for MLIT-JINR. A distinctive feature of this research is the close cooperation of the Meshcheryakov Laboratory of Information Technologies (MLIT) with research groups from all JINR laboratories and Member State institutions.

Expected results in the current year:

1. Detailed three-dimensional numerical analysis of the main characteristics of superconducting magnets within the NICA and NEW NUCLOTRON projects. Simulation of the operating modes of the MSC230 future isochronous cyclotron.

Development of methods and software packages for the symbolic-numerical research of: processes (expansion of matter, crater formation, ablation) in materials under the action of ultrashort laser pulses; nuclear interactions (calculation of their characteristics, comparison with experimental data and theoretical estimates); stochastic kinetic models; models of complex systems in condensed matter physics.

Development of effective approximation, smoothing and numerical integration algorithms based on the basic element method (BEM).

Simulation of 5CB and 8CB nematic liquid crystals under the influence of orienting forces.

Development of techniques for modeling the irradiation of complex structure targets with high-energy particles on the basis of the complex optimization of parallel algorithms and programs of molecular dynamics and of the continuous-atomistic method.

Adaptation and application of the separated formfactors method for the study of the vesicular structure of phospholipid-based nanodrugs from small-angle scattering data.

Simulation of the temperature evolution of neutron stars with strong magnetic fields, taking into account additional heat sources. Application of the Bayesian inference method for constructing the mass spectra of isolated neutron stars from multichannel astronomy data.

Investigation of the properties of diquarks and baryons in dense and hot nuclear matter, their effect on the birth of strangeness. Theoretical description and numerical simulation of $gg \rightarrow \pi\pi$ gluon scattering processes in heavy-ion collisions.

2. Geant4 package-based analysis of the strange particle yield in hadron-hadron and nucleus-nucleus collisions within the BM@N and MPD experiments. Modeling of pp interactions in the SPD experiment within the hadronic programs QGS and FTF of the Geant4 package, in particular, the production of charmed particles.

Development and support of the Monte-Carlo generator of heavy-ion collisions, DCM-QGSM-SMM, and its application to the analysis of physical effects measured at the BM@N, SRC and MPD facilities.

Algorithmic and software support for the MPD experiment: automation of the indication and removal of obsolete packages and of their dependencies during automated builds of nicadist for mpdroot.

Algorithmic and software support for the BM@N experiment: modeling of detector signal responses, restoration of spatial coordinates, data reconstruction in new configurations of track detectors (runs 2022-2023); geometric alignment of detectors.

Testing and debugging, in line with user requirements, and commissioning of the configuration, geometric information systems, and the database of physical event metadata, for the NICA experiments.

Software support for the ATLAS experiment: refinement of the ATLAS Event Picking Service and commissioning of the second version of the service; adaptation of the CREST information system for work in the ATHENA software environment, development of operational monitoring of the TDAQ system based on GRAFANA9.

Development and improvement of the algorithms and methods for reconstructing the trajectories of charged particles in the cathode-strip chambers, assessment of the spatial resolution of cathode-strip chambers in the CMS experiment Run3 data (2022–2023).

Development of data processing system software for the Baikal-GVD project.

Monte-Carlo simulation of the background counting of the scintillation-tungsten component of the OLVE-HERO detector.

Development of the SAS software package for the primary processing of data obtained on the small-angle neutron scattering spectrometer with the multidetector system (modernization before the start of the reactor).

Development of a web application designed to fit data obtained in the study of the crystallographic texture of various objects using neutron diffraction and other state-of-the-art methods of neutronography.

Application of artificial neural networks and cellular automata in tasks of experimental data processing.

3. Development of neural network algorithms for the recognition, segmentation and classification of brain cells and behavioral patterns of laboratory animals.

Development of machine and deep learning methods for: event reconstruction in the MPD, BM@N and SPD experiments; analysis of fine structures in the mass distribution of nuclear reaction products in experiments with transuranic elements; study of nanocomposite thin films using neutron and X-ray reflectometry methods; plant disease detection tasks; environmental monitoring.

Further development of hp-adaptive high-precision methods for solving elliptic problems on multicore computers and development of highly scalable parallel algorithms for spatial problems of magnetostatics.

Development of methods and programs for integrating multidimensional functions using neural networks in the case of functional limits.

Calculation of the adsorption characteristics of superheavy atoms at the surface of gold by density functional theory methods using the AMS computing software package on the "Govorun" supercomputer.

Development of algorithms to calculate sub-barrier fusion reactions of heavy nuclei within the channel coupling method.

Development of digital methods to assess the growth rate of rounding errors in a uniform metric using the REDUCE system on the "Govorun" supercomputer.

Development of methods and software tools to solve service and applied tasks using the technologies of Big Data processing and data mining.

Elaboration and development of methods for storage, processing and physical analysis of data for the experiments of the NICA megaproject within the Big Data approach.

4. Development of quantum algorithms and their implementation in the environment of quantum computing simulators for the investigation of the electron shells of superheavy element atoms, for experimental data processing and analysis, as well as for the intelligent control of different systems.

Development of embedded quantum intelligent regulators for use as control modules of different robotic devices. Development of a prototype of a quantum intelligent regulator for the coordinated control of the pressure and consumption of nitrogen and helium during the automated cooling of a superconducting magnet (different emergency situations included).

Development and testing of an intelligent system for controlling the modes of the high-frequency stations of the Nuclotron of the NICA accelerator complex on the basis of the principles of quantum software engineering.

Modeling of quantum algorithms on simulators using classical computing architectures (CPU, GPU) to solve the problem of calculating the structure of the electronic spectrum of simple molecules.

Numerical study of the role of collective information in networks of quantum agents.

Development of algorithms for the constructive decomposition of quantum systems into subsystems using computer algebra methods and computational group theory.

Derivation of criteria for the reducibility of polynomials to zero based on machine learning methods.

Development of a software package for analytical computations of one-loop Feynman integrals entering the light-by-light scattering processes, $gg \rightarrow WW$, $hh \rightarrow ZZ$, $hh \rightarrow ZH$, $gg \rightarrow hh$.

Simulation of the real time non-equilibrium evolution and quantum phase transitions in the two-dimensional quantum Ising model on a quantum computer.

Creation of a software package for the fast generation of arbitrary rank random qudit density matrices.

Modeling of quantum registers and quantum logic gates based on quantum dots of complex geometry.

**Analytical and Methodological Work to Assess the Prospects
of Scientific Research and Cooperation
in the Main Directions of JINR's Development.
Organization of International Cooperation**

Theme leaders: V. A. Matveev
S.N. Nedelko

Deputies: O.A. Culicov
D.V. Kamanin

Participating Countries and International organizations:

Member States of JINR, states participating in JINR activities on the basis of bilateral agreements, international organizations.

Issues addressed and main goals of research:

Development of analytical materials concerning prospects of scientific research. Preparation of scientific research plans. Development of science-organization and methodological materials for the special-purpose financing of research areas, themes and projects. Development and application of information systems for the analysis of results of theoretical and experimental research. Organization of international cooperation with the Member States of JINR, with states participating in JINR activities on the basis of bilateral agreements, and with scientific research institutions with which JINR has collaboration agreements.

Expected results in the current year:

1. Improvement of the organization and coordination of JINR scientific research work.
2. Analysis of the results of JINR activities for 2022 in the main research areas.
3. Update, administration and support of the electronic system for maintaining the Topical Plan for JINR Research and International Cooperation (Topical Plan). Preparation for the publication of the Topical Plan for the year 2024. Identification of JINR's priority research directions for 2024.
4. Development of JINR's grantmaking activities and participation in special-purpose programmes for financing scientific research in 2023.
5. Preparation of analytical materials for ministries and agencies.
6. Development and promotion of JINR's information resources on the Internet. Support of the system of accounting of protocols on scientific and technological cooperation.
7. Promotion of realization of JINR's right to independently confer academic degrees. Support of the operation of JINR's dissertational councils.
8. Preparation for the publication of the JINR Annual Report for 2022. Preparation of materials for the INIS system.
9. Scientific and organizational support and preparation of materials of JINR's governing and advisory bodies.
10. Prompt interaction with representatives of Member States and states participating in the activities of JINR on the basis of bilateral agreements in the fields of scientific research. Organization and holding of meetings of cooperation committees. Interaction with international organizations.
11. Organization and holding of contests for JINR Prizes, preparation of materials for nominating candidates for memberships in academies of sciences, for conferring honorary titles, for awarding medals and other decorations.

Organization, Support and Development of the JINR Human Resources Programme

Theme leaders: G.V. Trubnikov
V.A. Matveev
A.Yu. Verkheev

Participating Countries and International organizations:

Armenia, Azerbaijan, Belarus, Bulgaria, CERN, Cuba, Czech Republic, Egypt, Kazakhstan, Moldova, Mongolia, Poland, Romania, Russia, Serbia, Slovakia, South Africa, Ukraine, Uzbekistan, Vietnam.

Issues addressed and main goals of research:

Development of the human resources training programmes at JINR aimed at further employment of the trainees as scientific and engineering specialists of the Institute; creation of appropriate conditions for students and PhD students from universities of the Member States to enable them to work on their qualification theses based on the research conducted in the laboratories of the Institute; support of the educational process for students of the JINR-based departments at the universities of the Russian Federation, as well as participation in the development of network training programmes; cooperation with the branch of Moscow State University in Dubna; organization and running of international student practices and schools for young people from the JINR Member States; training of students, PhD students, and interns on the basis of cooperation agreements with the universities of the JINR Member States and international organizations; building and maintenance of the laboratory environment intended for hands-on training in scientific and engineering disciplines; support and further development of the system of training courses aimed at gaining or improving professional skills and qualifications of JINR technical and engineering personnel; development of the JINR educational portal (edu.jinr.ru) and interactive exposition "JINR main facilities"; further development of the set of e-learning courses on the main areas of research conducted at JINR in the official languages of the Institute and by its leading experts; development of virtual and real laboratories allowing students to be trained using modern experimental equipment; development of the JINR outreach programme and promotion of modern science achievements among school students and teachers, organization of excursions and online tours of the JINR basic facilities; participation in science festivals, exhibitions, and forums promoting JINR; development of cooperation and communication with educational centres for school students; design and production of information materials for the JINR information centers, administration of the UC groups in the social media.

Expected results upon completion of the theme:

1. Participation in the development of lecture courses and seminars for students and PhD students of the JINR-based departments of the Russian universities.
2. Support of the system of assigning Institute employees to JINR for preparation of their PhD theses without completing the academic programme of the PhD course. Participation in the Institute system of attestation of scientific personnel.
3. Organization and running of the JINR student programme "START", online programme "INTEREST", international student schools and practices.
4. Training of students and PhD students at JINR on the basis of cooperation agreements with the universities of the JINR Member States and other countries.
5. Maintenance of the laboratories intended for hands-on training in scientific and engineering disciplines (Engineering and Physics Training): accelerator, vacuum, and RF technology, radio electronics, dosimetry, pixel detectors.
6. Further development of the licensed system of training courses aimed at gaining or improving professional skills and qualifications of the technical and engineering personnel of the Institute.
7. Development of a set of virtual laboratory works and e-learning courses in nuclear physics, particle physics, condensed matter physics, and radiobiology.
8. Further development of the system of virtual laboratories enabling intergration of the latest results of scientific research into the educational process.

9. Further development of cooperation with CERN in the implementation of advanced training programmes for school teachers from the JINR Member States.
10. Development of cooperation with the Educational Foundation "Talent and Success" to implement joint programmes on science outreach on the basis of the Sirius Educational Centre in Sochi.
11. Participation in extracurricular programmes of the autonomous non-commercial educational organisation "Physics and Mathematics Lyceum named after Academician V.G. Kadyshevsky" in Dubna.
12. Support of Dubna Interschool Physics and Mathematics Open Classroom, other educational institutions, and science programmes for school students.
13. Development of printed and electronic popular-science informational materials promoting the Institute and modern scientific achievements.
14. Provision of JINR partner universities and information centres in the Member States with electronic and printed informational materials.

Expected results in the current year:

1. Support and supervision of the educational process at the JINR-based departments of the Russian universities.
2. Support of the system of assigning young researchers to JINR laboratories for preparation of their PhD theses.
3. Organization and running of the International Student Practices in JINR Fields of Research for students of the JINR Member States' universities.
4. Organization and running of the JINR student programme "START" and online programme "INTEREST".
5. Development of an information system on the preparation of qualification theses by students and PhD students from universities of the JINR Member States in the Institute laboratories.
6. Organization and running of the Engineering and Physics Training hands-on activities for students and PhD students from the JINR Member States, further development of the existing laboratory works, development of a laboratory work on dosimetry.
7. Organization of scientific schools for physics teachers from the Institute Member States at CERN and JINR.
8. Further development of virtual tours of JINR basic facilities and video-conferences with educational institutions of the JINR Member States. organization and guidance of group visits to JINR for school and university students.
9. Development of a set of e-learning courses in nuclear physics, particle physics, condensed matter physics, and the basic facilities of the Institute.
10. Promotion of modern educational resources in the JINR Member States.
11. Organization of the participation of JINR in science festivals on the basis of Russian universities.
12. Development of the language courses programme aimed at teaching Russian as a foreign language and English to JINR personnel.
13. Participation of JINR in an interdisciplinary social educational project "Summer School-2023", organization and running of the Physics Workshop "105th element".
14. Participation in the design and production of printed, video, and exhibition information materials intended for the JINR information centres. Cooperation with JINR information centres in the fields of science outreach and education (online lectures and excursions, internships and practices).
15. Running of popular science events in schools (city festival "Physics Days - 2023", lectures, demonstrations of chemical and physical experiments, quizzes, quests, excursions, meetings with scientists, vocational orientation events, and competitions for school and university students).
16. Organization of the participation of JINR in career forums at universities.
